

MENOMINEE INDIAN SCHOOL DISTRICT

453.37-Rule

NURSING GUIDELINES FOR STUDENTS WITH SCABIES

1. Inspect skin for small, itchy blisters (usually in a thin line) in several parts of the body especially in the finger webs, under the arms and elbows. Rash can also be found behind knees, between toes and under buttocks. Itching is intense especially at night. A broken blister leaves scratch marks and thickened skin.
2. If positive signs and symptoms are present, notify parents/guardian. Advise parent/guardian to pick up student and to seek medical attention as soon as possible. Student will be isolated from other students until picked up by parent/guardian.
3. Parent/guardian will receive information on scabies. (See 453.37-Exhibit).
4. Upon returning to school a return to school slip from medical personnel must be submitted to the office personnel and school nurse. The parent/guardian must continue proper follow-up care.
