Hello Juniors!

Senior year is coming soon! Data and Technology Services has interns, but they will be graduating. We are looking for an intern or interns to replace them in the 20-21 school year, with intermittent time during the summer.

- We want Juniors (Seniors in 20-21).
- The internship will be unpaid. You need to be ok with that.
- The intern will work 3-10 hours per week, usually right afterschool (e.g. 2:30 to 4:00). Schedules can be flexible.
- We want someone with a particular interest in a technology-related career that will benefit from working in IT. This means someone seeking a career as a Network Administrator, Computer Technician, Programming, Graphics Design, or a related field.
- We want someone who has focused on IT and that we won't be teaching from scratch. We want you to learn from the experience, but you need to know the basics. If you can't format a hard drive, or don't know the difference between a CAT cable and a USB cable, then you aren't quite ready for the tasks we will assign.
- We don't want someone who is simply looking for job experience without an IT connection.
- We're going to put you to work. It's not party time. The environment is relaxed, but this will be an experience in adulting.
- You must be dedicated to working. If you're too busy with wrestling, chess club, or whatever other activity, thanks for applying, but no thanks. We'll work around one activity or two, but if you can't squeeze us into your social calendar, no thank you.
- You may be sent into classrooms, sometimes by yourself, to fix computers or projectors or whatever the presenting problem might be. You need to
  o have a modicum of maturity and professionalism
  o address the teachers and staff in a professional capacity
  o conduct yourself as a member of IT staff and
  o be comfortable in this role.
- You need to have a sense of IT. There are some skills that are learned, but there is a problem solving and an analytical component to IT that is somewhat innate.
- If you are a Running Start student, that is a definite plus, but not required.
- This is about getting hands onto technology and getting real-world experience to help launch you into your profession.

In addition to the ongoing training, at the end of the internship, we will provide you with letters of recommendation and references that you can use in obtaining a job.

To apply, please send a cover letter and resume (Ms. Standard can assist you with developing these if you don't have them) to Jason Wilke-Nguyen (wilkej@tukwila.wednet.edu) indicating why you want the internship, and what your future career interests are.

We welcome students of diverse backgrounds. Who you are doesn't matter. Your attitude and interest level DO matter. If you have an interest in a technology based-career and know the difference between a hard drive and flash drive, then please consider applying!
