

The substance abuse counselor is an integral member of the clinical team and collaborates with the teachers, primary clinical therapists, parents/guardians, and external agencies in accordance with our standards of best practices for treatment. With parent/guardian permission, adolescent students may undergo an initial substance use screening to determine the degree of their exposure and/or involvement with drugs or alcohol, which drives the level of care required. Our mission is to provide comprehensive care for students in order to assist them in identifying healthy choices that will lead them to fulfillment of positive, life goals. Individual addictions counseling, substance abuse education groups, and speciality groups are also available to any students identified with this need.
