K.A.R.E- Kommittee for Autism Research and Education

This resource book was created as a result of a grant from the Bureau of Autism Services. The goal is to help families of newly diagnosed children on the autism spectrum navigate through the vast amount of services and products that are currently available for individuals with autism. The inclusion of any particular agency or business does not imply an endorsement from The Bureau of Autism Services, K.A.R.E, or any agencies that link this guide to their website.

Many parents and professionals worked diligently to create this guide. The K.A.R.E group would like to thank everyone for the time and dedication they put into creating this guide. We would also like to thank the Bureau of Autism Services for the grant and for allowing us to incorporate some of their publications into the guide. We would also like to thank About.com for allowing us to use some of their autism publications.

The mission of the K.A.R.E group is the belief that through it's collaboration with families, educators, and community partners we will work together to enhance the lives of individuals with autism spectrum disorder. If you would like more information on the K.A.R.E group, please contact Lisa Hampe at 1-800-328-6481, ext. 272 or email hampel@iu1.k12.pa.us or Renae Kotchman ext. 105 or email kotchmanr@iu1.k12.pa.us.

This Resource Guide can be viewed from the website listed below. Permission is given to copy this guide (with the exception of the Autism Bureau and About.com inserts) as long as credit is given to the K.A.R.E. group.

K.A.R.E Resource Guide
Autism 101
Important Milestones
By The End Of 3 Months

Simply fill out your child’s name, age and today’s date and then check off the milestones your child has already achieved.

<table>
<thead>
<tr>
<th>Child’s Name</th>
<th>Child’s Age</th>
<th>Today’s Date</th>
</tr>
</thead>
</table>

**Social and Emotional**
- Begins to develop a social smile
- Enjoys playing with other people and may cry when playing stops
- Becomes more expressive and communicates more with face and body
- Imitates some movements and facial expressions

**Hearing and Speech**
- Smiles at the sound of your voice
- Begins to babble
- Begins to imitate some sounds
- Turns head toward direction of sound

**Movement**
- Raises head and chest when lying on stomach
- Supports upper body with arms when lying on stomach
- Stretches legs out and kicks when lying on stomach or back
- Opens and shuts hands
- Pushes down on legs when feet are placed on a firm surface
- Brings hand to mouth
- Takes swipes at dangling objects with hands
- Grasps and shakes hand toys

**Vision**
- Watches faces intently
- Follows moving objects
- Recognizes familiar objects and people at a distance
- Starts using hands and eyes in coordination

www.cdc.gov/actearly
**Important Milestones**

**By The End Of 7 Months**

Simply fill out your child’s name, age and today’s date and then check off the milestones your child has already achieved.

<table>
<thead>
<tr>
<th>Child’s Name</th>
<th>Child’s Age</th>
<th>Today’s Date</th>
</tr>
</thead>
</table>

**Social and Emotional**
- Enjoys social play
- Interested in mirror images
- Responds to other people’s expressions of emotion and appears joyful often

**Vision**
- Develops full color vision
- Distance vision matures
- Ability to track moving objects improves

**Cognitive**
- Finds partially hidden object
- Explores with hands and mouth
- Struggles to get objects that are out of reach

**Language**
- Responds to own name
- Begins to respond to “no”
- Can tell emotions by tone of voice
- Responds to sound by making sounds
- Uses voice to express joy and displeasure
- Babbles chains of sounds

**Movement**
- Rolls both ways (front to back, back to front)
- Sits with, and then without, support on hands
- Supports whole weight on legs
- Reaches with one hand
- Transfers object from hand to hand
- Uses hand to rake objects

Learn the Signs. Act Early.
Important Milestones
By The End Of 1 Year (12 Months)

Simply fill out your child’s name, age and today’s date and then check off the milestones your child has already achieved.

<table>
<thead>
<tr>
<th>Child's Name</th>
<th>Child's Age</th>
<th>Today's Date</th>
</tr>
</thead>
</table>

**Social and Emotional**
- Shy or anxious with strangers
- Cries when mother or father leaves
- Enjoys imitating people in his play
- Shows specific preferences for certain people and toys
- Tests parental responses to his actions during feedings
- Tests parental responses to his behavior
- May be fearful in some situations
- Prefers mother and/or regular caregiver over all others
- Repeats sounds or gestures for attention
- Finger-feeds himself
- Extends arm or leg to help when being dressed

**Language**
- Pays increasing attention to speech
- Responds to simple verbal requests
- Responds to “no”
- Uses simple gestures, such as shaking head for “no”
- Babbles with inflection (changes in tone)
- Says “dada” and “mama”
- Uses exclamations, such as “Oh-oh!”
- Tries to imitate words

**Cognitive**
- Explores objects in many different ways (shaking, banging, throwing, dropping)
- Finds hidden objects easily
- Looks at correct picture when the image is named
- Imitates gestures
- Begins to use objects correctly (drinking from cup, brushing hair, dialing phone, listening to receiver)

# Important Milestones

**By The End Of 2 Years (24 Months)**

Simply fill out your child’s name, age and today’s date and then check off the milestones your child has already achieved.

<table>
<thead>
<tr>
<th>Child’s Name</th>
<th>Child’s Age</th>
<th>Today’s Date</th>
</tr>
</thead>
</table>

## Social and Emotional
- Follows simple instructions
- Repeats words overheard in conversation
- Imitates behavior of others, especially adults and older children
- More aware of herself as separate from others
- More excited about company of other children

## Emotional
- Demonstrates increasing independence
- Begins to show defiant behavior
- Separation anxiety increases toward midyear then fades

## Cognitive
- Finds objects even when hidden under two or three covers
- Begins to sort by shapes and colors
- Begins make-believe play

## Movement
- Walks alone
- Pulls toys behind her while walking
- Carries large toy or several toys while walking
- Begins to run
- Stands on tiptoe
- Kicks a ball
- Climbs onto and down from furniture unassisted
- Walks up and down stairs holding on to support

## Hand and Finger Skills
- Scribbles on his or her own
- Turns over container to pour out contents
- Builds tower of four blocks or more
- Might use one hand more often than the other

## Language
- Points to object or picture when it’s named for him
- Recognizes names of familiar people, objects, and body parts
- Says several single words (by 15 to 18 months)
- Uses simple phrases (by 18 to 24 months)
- Uses 2- to 4-word sentences

www.cdc.gov/actearly
### Important Milestones

**By The End Of 3 Years (36 Months)**

Simply fill out your child’s name, age and today’s date and then check off the milestones your child has already achieved.

<table>
<thead>
<tr>
<th>Child’s Name</th>
<th>Child’s Age</th>
<th>Today’s Date</th>
</tr>
</thead>
</table>

#### Social and Emotional
- Imitates adults and playmates
- Spontaneously shows affection for familiar playmates
- Can take turns in games
- Understands concept of “mine” and “his/hers”

#### Emotional
- Expresses affection openly
- Expresses a wide range of emotions
- By 3, separates easily from parents
- Objects to major changes in routine

#### Cognitive
- Makes mechanical toys work
- Matches an object in her hand or room to a picture in a book
- Plays make-believe with dolls, animals, and people
- Sorts objects by shape and color
- Completes puzzles with three or four pieces
- Understands concept of “two”

#### Language
- Follows a two- or three-part command
- Recognizes and identifies almost all common objects and pictures
- Understands most sentences
- Understands placement in space (“on,” “in,” “under”)
- Uses 4- to 5-word sentences
- Can say name, age, and sex
- Uses pronouns (I, you, me, we, they) and some plurals (cars, dogs, cats)
- Strangers can understand most of her words

#### Movement
- Climbs well
- Walks up and down stairs, alternating feet (one foot per stair step)
- Kicks ball
- Runs easily
- Pedals tricycle
- Bends over easily without falling

#### Hand and Finger Skills
- Makes up-and-down, side-to-side, and circular lines with pencil or crayon
- Turns book pages one at a time
- Builds a tower of more than six blocks
- Holds a pencil in writing position
- Screws and unscrews jar lids, nuts, and bolts
- Turns rotating handles

Learn the Signs. Act Early.
What is Autism?

Autism is very complex, life-long disability that usually begins to appear in a child between 15 and 20 months of age. A 2007 study issued by the federal Centers for Disease Control and Prevention indicates that one in 150 children has some form of autism. Boys are four times more likely to have autism than girls. Recent research indicates autism has a genetic basis. Autism can affect social behavior, language skills and the way your child’s body acts. Sometimes children and adults with autism behave in ways that seem strange or disturbing.

Children and adults with autism do not always show the same symptoms. Always consult your child’s doctor to get a proper diagnosis. Autism is actually one of five disorders that are described commonly as "Autism Spectrum Disorders," which include:

- Autistic Disorder
- Asperger Syndrome
- Childhood Disintegrative Disorder
- Rett Syndrome
- Pervasive Developmental Disorders (Not Otherwise Specified)

This Web site uses the term "autism" or "ASD" to refer to all Autism Spectrum Disorders.

Symptoms of the way autism affects social behavior may include:

- Having less eye contact, even with family members
- Not responding when name is called
- Social awkwardness or lack of interest in others
- Being very attached to objects and using them in unusual ways
- Difficulty with transitions or change

Symptoms of the way autism affects language skills may involve:

- Delay in or failure to speak
- Absence of the use of gestures such as pointing or waving
- Impaired ability to have a conversation
- Repeating words or phrases but without meaning

Symptoms of the way autism affects the way your child’s body acts may include: inflexibility and rigidity, high tolerance for pain, hand flapping or spinning.

Children and adults with autism sometimes have other disorders and disabilities, so it is very important to understand each individual child or adult in order to develop the most effective treatment plan. How each person with autism grows and develops depends on the interaction between his or her autism, family members and friends, teachers and other professionals, and types of treatment.
For more detailed information and perspectives on the complicated nature of autism, visit these Web sites:

- National Institutes of Health
- Kennedy Krieger Institute
- Organization for Autism Research

Created by dpw communications office

How to Apply for Medical Assistance for Your Child with Autism

Building a support team around your child is the real first step

**Step 1: Apply for Social Security’s Supplemental Security Income (SSI)**  Why must you apply for SSI? Medical Assistance (MA) will pay for many of the services your child will need and in order too become eligible for Medical Assistance, you must first show proof that you applied for federal aid via SSI. "Proof" is in the form either of acceptance documents from SSI or a rejection letter.

You can apply for SSI online, by phone or in person. If you apply in person at your local Social Security office, you will need to bring your child’s Social Security card, original birth certificate, and "medical evidence" of your child’s diagnosis from a qualified physician (neurologist, psychiatrist, developmental pediatrician or PA certified psychologist). You will be asked for information on your family’s assets. If your assets exceed allowable SSI limits (regardless of your child’s diagnosis) you may be immediately "rejected." Ask the Social Security staff person to issue an official rejection letter immediately. If a letter cannot be issued while you wait, ask to have it mailed it to you. You will need the original rejection letter. Make a copy of the rejection letter for your own records.

Apply for SSI phone at: 1-800-772-1213 or online. If your child is found eligible for SSI, he or she is automatically eligible for Medical Assistance. See note on bottom of page for more information.

**Step 2: Obtain the Correct Medical Assistance Application**  You can apply for Medical Assistance online using COMPASS. You can also request a "General Benefits Application 600C" for Medical Assistance (PDF download): Application for Health Care Coverage You can also obtain this application from your County Assistance Office (CAO) or your local elected official’s office.

**Step 3: Complete the Entire Application**  Complete a printed version even if you apply online, as it will help you through the process. If you intend to mail your application, fill out the application completely, including income information. Fill out all sections, even portions you think may not apply to your child. Make a copy of your completed application. You will need this in case your application is lost, and it will be a useful reference when for the required annual renewal applications.

If you have questions about the application, call the Department of Public Welfare at 1-
800-692-7462 (1-800-451-5886 TDD for individuals with hearing impairments). You can also call your County Assistance Office. The Pennsylvania Health Law Project can help walk you through filling out the application.

On page 4 of the application, write YES next to your child’s name in the column marked "Are you applying for this person?" Also write on page 4 at top: "MA FOR DISABLED CHILD HANDBOOK SECTION 355.4." This note flags your application as one for a child with autism.

**Step 4: Bring the Required Documents to Your Local County Assistance Office (CAO) for an Interview**  
An interview can be done in person at your County Assistance Office or by phone. Some parents have found that applying in person, especially with all the proper documents, helps build a support team. You can also mail the application and documents – or apply online using COMPASS -- and follow up by phone to arrange an appointment. Some parents report that going to their local CAO without an appointment - and simply waiting for the next available caseworker -- is faster. Bring all of these documents for the interview:

- A completed MA Application
- Your child’s original birth certificate
- Your child’s Social Security card
- The original SSI rejection letter (if you have received a rejection)
- A document containing your child’s diagnosis of autism from a physician qualified to diagnose autism
- Recent pay stub (or most recent IRS Form 1040 if self-employed)
- Your Pennsylvania driver’s license
- Evidence of your Pennsylvania residency (example: a utility bill containing your name and Pennsylvania address)

Your child is not required to attend any interview.

This interview and review of your documentation should result in your child being found eligible as a child with autism. The MA system in Pennsylvania evaluates your child based upon the same criteria as SSI, but without considering the family’s financial situation. If your child is found eligible on a provisional basis, you will be issued a Medical Assistance Identification Number. Write this down, along with the name and phone number for your assigned caseworker. You should also request a temporary, or interim, ACCESS card, if it is not provided. This card can be used immediately with health care and behavioral health care providers. A permanent card will be mailed to you.

In some cases, persons may qualify for payment of medical services that were provided up to three months before the month in which you applied— this is called "retroactive" coverage.
Step 5: Prepare to Renew Your Application Every Year  You will need to complete a re-application once a year. A notice will be mailed to you by your CAO caseworker. You can reapply by mail or online using the Pennsylvania COMPASS system.

Step 6: Once Your Child is Eligible for MA and Assigned an MA Identification Number, You Must Make Two Choices:

First, using the online Pennsylvania Medical Assistance Enrollment Service, choose a physical health services provider in your county.

Once you have chosen a physical health services provider, you will receive a Member ID card. Bring this card and your ACCESS card to all medical appointments for your child. Also, bring these cards to your preferred pharmacy, so that they can put your child’s information in their system.

Each plan provider has a Member Services unit, and a Special Needs unit. Write these numbers down with your other important numbers. Depending on your county of residence, other services, including transportation to medical appointments, may be available.

Second, find out which behavioral health care provider serves your county. You will not have choice to make: each county has a contract with behavioral health care provider. If you plan to obtain behavioral health services, you will need to contact a local direct-care wraparound agency and proceed with the intake process. These agencies are responsible to the care provider mentioned above contracted by your county.

Complaints

You should have a copy of the process for complaining in your county Health Care Plan Provider’s "Member Handbook," mailed to you when you signed up for physical and behavioral health services

If you need a handbook, call your county Plan Provider to have them send you one. For Medical Assistance services, there is a grievance system to protect your rights. Each Plan Provider is required to have a formal process to help resolve client issues. In order to invoke those rights, you must use the complaint system.

Comments

The Department of Public Welfare welcomes constructive feedback about Medical Assistance services provided to families with autism. Use the DPW Online Feedback Page to give us your feedback.

Additional Independent Information About Your Child’s Health Rights

For free legal advice and assistance call the Pennsylvania Health Law Project at (800)
274-3258 or (412) 434-5779.

***

About SSI (from Step 1 at top of page)

SSI provides financial help to people who have limited income and assets and meet other rules (including disability). Based on the information you give about your child’s (the "claimant") income, assets, citizenship status and disability and your income and assets, you may be eligible for SSI. Parent assets can be counted against a child’s allowable $2,000 resource limit. In most states, a child who gets SSI benefits can get Medicaid to help pay medical bills.

FYI: Children with autism fall under the category of "autistic disorder and other pervasive developmental disorders (112.10) in SSI’s "Disability Evaluation Under Social Security," or "Bluebook."

Last modified on: June 30, 2008
What is Early Intervention?

Early Intervention is the best treatment for children diagnosed with autism before the age of five. There are two different types of Early Intervention Services for children. There are the birth to three services and the services for three to five years old.

Early Intervention- Birth to three:

The Early Intervention Program is designed to help families of infants and toddlers with, or at risk for, developmental delays to enhance the development of their children.

Entry into this program begins with a referral to Washington Communities MH/MR Center. A service coordinator will visit the family and complete a Family Assessment along with other required paper work and schedule evaluations to determine the child’s eligibility for Early Intervention Services. Next, a Multidisciplinary Team Evaluation will determine eligibility. If the child is found eligible for services an Individual Family Service Plan (IFSP) will be developed. * IFSP will soon have a different name and become one document that continues through the Early Intervention process.

Services can include; Developmental Specialist, Teachers of the Hearing-Impaired, Physical Therapist, Speech/Language Pathologist, Occupational Therapist, Teachers of the Visually-Impaired/Orientation and Mobility Specialist and other services.

These teachers and therapists assist parents, family members or other caregivers in learning ways to support their children within their daily routines and activities in their natural environment.

The staff can assist families to explore new ways to provide learning opportunities for their children throughout the day in any setting where they spend their time. They can also assist families in making accommodations (as necessary) to help each child participate more fully in family and community life.

Parents’ participation in the development of each child’s individual plan assures that all other team members know the goals and dreams families have for their children, and that they will work with them toward the accomplishment of these important outcomes.

Services for eligible children are provided year-round, and at no cost to families. The team decides the services and provider of service.

For more information about Early Intervention Services or to make a referral call:

Washington Communities MH/MR Center, Inc.
378 West Chestnut Street, Suite 205
Washington, PA 15301
724-229-2620 or 724-225-6940 or 866-765-2888
Vickie Amos, Early Intervention Coordinator 724-228-6832
Early Intervention-Three to five:

Intermediate Unit 1

Early Intervention preschool services are provided for children from three to five years old who exhibit a developmental delay or a physical or mental disability that requires specially designed instruction/special education services.

The term "developmental delay" includes delays of 25% or more in physical, cognitive, language and speech development or adaptive behavior or self help skills.

The Early Intervention Programs follow guidelines from the Department of Education, specifically Chapters 14 and 342 of the Pennsylvania School Code, which regulates special education services.

The Early Intervention services offered by Intermediate Unit 1's Child ALERT include: Speech and language therapy, Occupational Therapy, Physical Therapy, Vision Support, Hearing Support and Psychological Services.

These services are provided in a variety of settings, including: home based settings, private preschools, daycares, Head Start, and Child ALERT classrooms.

Developmentally Appropriate Practices (DAP) are used to address the physical, cognitive, communication, social/emotional and self-help developmental needs of children. Services are provided at no cost to families.

Questions about early intervention?

Call CONNECT 1-800-692-7288 (TTY Accessible)

CONNECT puts families in touch with the people who can help.

…helping families develop their child’s potential.

Serving Children with Developmental Delays
What is Early Intervention?
Early intervention is a program that helps families develop their child’s potential. All children grow and learn at different rates. Children who are developing more slowly than typical children are offered early intervention services. Support services are offered to families.

Who is eligible?
Infants, toddlers, and preschool children who have special needs due to developmental delays or disabilities are eligible to receive early intervention services.

What services are provided to meet the developmental needs of a child?
The services provided to children and their families differ based upon the individual needs of each child and the child’s family. Services such as speech therapy, physical therapy, parent education/supports, and other family-centered services assist in child development and may be included in a family’s early intervention program.

Where do families receive services?
Services may be provided in the child’s home, child care center, nursery school, play group, and/or Head Start program. Services are provided at no cost to families.

Who should parents contact to see if their child is eligible for early intervention services?
Parents who have questions about their child’s development or disability may talk with their family physician or health care provider, school district, intermediate unit, or county early intervention program. The CONNECT Helpline, 1-800-692-7288, will also help answer questions about child development and specific disabilities. CONNECT staff may refer a family to the appropriate local agency to receive a developmental assessment. This assessment will determine if the child is eligible for early intervention services.
Glossary of Terms:

This glossary is not a comprehensive list. It will expand with time. If there is a particular term or acronym you have encountered that you do not understand, please contact us so that we can add it to the list.

**ACCESS card:** The name of the Medical Assistance ID card indicating that your child is eligible for Medical Assistance. To apply for Medical Assistance, see How to Apply for Medical Assistance (MA) for Your Child with Autism in Pennsylvania (Age 21 or under).

**Age of Majority:** Once a child with autism or ASD turns 14, he or she may legally refuse treatment, including wraparound, unless parents have received a court order to make medical decisions on behalf of their son or daughter. For details, visit Child Behavioral Health Medical Necessity Criteria - EPSDT: Appendix T Part B2 - Child BH Medical Necessity Criteria - EPSDT

**Antipsychotics:** Antipsychotic medications act against symptoms of anti-social or self-destructive behavior. These medications cannot "cure," but they may lessen the severity of some symptoms. A fuller discussion of antipsychotic medications can be found at the National Institute of Mental Health.

**Asperger Syndrome, Asperger Disorder or Asperger’s:** one of the conditions known as Pervasive Developmental Disorders. According to the National Institute of Neurological Disorders and Strokes, Asperger's is defined as a "developmental disorder that is characterized by limited interests or an unusual preoccupation with a particular subject to the exclusion of other activities." Asperger’s is also characterized by average or above average IQ, and verbal ability.

Other symptoms include:

- Repetitive routines or rituals.
- Strange speech and language, such as speaking in an overly formal manner or in a monotone or taking figures of speech literally.
- Socially and emotionally inappropriate behavior and the inability to interact successfully with peers.
- Problems with non-verbal communication, including the restricted use of gestures, limited or inappropriate facial expressions or a peculiar, stiff gaze.
- Clumsy and uncoordinated motor movements.

**Autism:** Autism is defined differently in federal education law than in federal disability law.

- Under the federal education law, the Individuals with Disabilities Education Act (IDEA) §300.8 (c)(1)(i), autism is defined as "a developmental disability significantly affecting verbal and nonverbal communication and social interaction, generally evident before age three, that adversely affects a child’s educational performance. Other characteristics often associated with autism are engagement in repetitive activities and stereotyped movements, resistance to environmental change or change in daily routines, and unusual responses to sensory experiences."
- Federal disability law recognizes the DSM-IV definition of autism, which focuses on behavior for diagnosis by a qualified medical professional. This definition is considered the "medical" diagnosis.

- The difference between the two definitions can be confusing. All behavioral health services include an evaluation to determine needs, just like public education. However, to be eligible for Medical Assistance your child must have (among other things) a medical diagnosis within the Autism Spectrum Disorder.
School districts, however, are required to evaluate any child suspected of having a disability under the federal education law, IDEA. They are not required to use the DSM-IV medical definition for identifying a child with autism (and some educational professionals may not be qualified to make this diagnosis). School districts must use the language of special education law to find a child eligible for special education services.

**Autistic:** A person with autism. Most families tend to prefer the phrase, "a person with autism," which focuses on the person rather than the label.

**Autism Spectrum Disorder or ASD:** The Centers for Disease Control and Prevention (CDC) defines ASD as "a group of developmental disabilities defined by significant impairments in social interaction and communication and the presence of unusual behaviors and interests. Many people with ASDs also have unusual ways of learning, paying attention, or reacting to different sensations. The thinking and learning abilities of people with ASDs can vary – from gifted to severely challenged. ASD begins before the age of 3 and lasts throughout a person's life. It occurs in all racial, ethnic, and socioeconomic groups and is four times more likely to occur in boys than girls." ASD includes the diagnoses of autistic disorder, PDD-NOS, Asperger Syndrome, Rett Syndrome and Childhood Disintegrative Disorder.

**Behavior Treatment Plan** (or Behavior Care Plan): A written plan describing goals and objectives and behavioral treatments proposed to address the client’s behavioral health issues. This includes what responsibilities the client, family and wraparound providers have to meet the goals to demonstrate clinical progress. The treatment plan is developed by wraparound staff with input from parents. It is then reviewed and agreed to in an Interagency Service Planning Team (ISPT) meeting, which can include county MH/MR staff, BH-MCO staff and the provider (but this team may vary by county). The ISPT must include school staff if the child is in a public school.

**Behavioral Health Managed Care Organization** (BH-MCO or "Bimco"): An organization contracted to manage countywide behavioral health services. BH-MCO’s are "indirect" providers, meaning that they manage the "direct" providers: wraparound agencies that actually provide service to your family.

**Behavioral Health Services:** These services are defined as the staff, type of support and service intensity necessary to address a person’s behavioral health needs. Wraparound agencies directly provide these services to clients in their home and/or school. Behavioral health does not include physical services such as occupational therapy, physical therapy or speech therapy. However, behavioral goals may overlap physical therapy goals. For example, if the desired outcome of a behavioral goal is to have a child "verbally refuse" instead of biting, then speech is how this goal will be met (and measured). More information at Behavioral Health Choices.

**Behavioral Specialist Consultant** (BSC): The professional who manages and coordinates services by the wraparound agency with a family. Though not required, BSC’s may have experience with people with autism, have autism-specific training, and/or be Board Certified Behavior Analysts.

**Board Certified Behavior Analyst** (BCBA): A professional who has passed a standardized curriculum and tests indicating they have certain competencies in the field of Applied Behavior Analysis. For details about Pennsylvania’s program, visit www.bacb.com.

**CARS** (Childhood Autism Rating Scale): According to WPS Publishing, "this 15-item behavior rating scale allows clinicians and educators to recognize and classify autistic children…on a scale from mild to severe autism." It does not offer recommendations for treatment or intervention.
Case Management: Support coordination of long-term services for persons with autism. A professional provides links to other professionals and referrals to appropriate services, and helps the family gain access to necessary supports. Case managers monitor established services, advocate and respond to crises.

Children's Health Insurance Program (CHIP): A program designed to provide insurance coverage to children whose families earn too much to qualify for Medical Assistance, do not have insurance offered through an employer and cannot afford to purchase private insurance.

Companion Attendant: A trained adult who assists a higher functioning person during college classes (taking notes, test taking, negotiating with instructor), and/or learning these skills.

COMPASS (COMonwealth of Pennsylvania Application for Social Services): COMPASS is Pennsylvania's online application for social-service programs that allows an individual to apply for social programs from a computer with Internet access at any time. It serves as a single access point for a variety of programs, including health care coverage, food stamps, cash assistance benefits, long term care and home energy assistance.

Consent to Treatment: According to Medical Assistance regulations, a child must consent to treatment after he or she turns 14. Many people with autism are incapable of giving informed consent; therefore, some parents must declare their child incompetent in court, or get power of attorney (POA).

Day Habilitation: Learning adaptive behavior skills to participate in ordinary community activities such as grocery shopping, banking, clothes shopping, taking a walk, going to the library or religious services.

Developmental Delay: This term is used to describe children (birth to 24 months) who may not be meeting developmental milestones related to their speech, language, physical, social and other skills typical for their age. It is also a specific legal term to describe children between the ages of three and five who are found eligible by the public education system to be eligible for early intervention services. This term has meaning and significance in PA education law. For more information on development milestones, visit the Mayo Clinic or First Signs.

DSM-IV: The Diagnostic and Statistical Manual of Mental Disorders (DSM-IV-TR, American Psychiatric Association, 2000). DSM uses the absence or delay of anticipated behaviors that are developmental milestones to clinically diagnose a person.

DPW: Pennsylvania Department of Public Welfare. See also Office of Medical Assistance Programs (OMAP) or Office of Mental Health and Substance Abuse Services (OMHSAS).

EPSDT or Early and Periodic Screening, Diagnosis and Treatment: The federal Medical Assistance program that funds medical and behavioral health services for children from birth to age 21. The keys to EPSDT are identifying problems early, starting at birth; checking children's health at periodic, age-appropriate intervals; doing physical, mental, developmental, dental, hearing, vision, and other screening tests to detect potential problems; performing diagnostic tests to follow up when a risk is identified; and treating the problems found.

Early Intervention (EI): Public services designed to address early learning and physical issues of children from birth to age five, provided at no cost to eligible children and their families. Direct services are provided through county providers, and local Intermediate Units. Administered through the Office of Child Development and Early Learning.

FAPE: Popular acronym for Free Appropriate Public Education.
FERPA (Family Educational Rights and Privacy Act): The federal law requiring that your child’s special education status and information remain confidential. See also HIPAA below.

HIPAA (Health Insurance Portability and Accountability Act): The federal law that protects your confidential personally identifiable medical information from ordinary disclosure, and requires health care providers to have in place -- and publicly distribute -- a policy for protecting your personal information.

HealthChoices: Pennsylvania’s mandatory Medicaid managed care program. The purpose of the program is to provide medical, behavioral, and substance abuse services to Medical Assistance recipients.

IDEA (Individuals with Disabilities Education Act): Reauthorized in 2004, this law forms the basis for a disabled student’s right to a free, appropriate, public education, or FAPE.

IEP (Individual Education Plan): This is a signed agreement of an IEP team outlining the what, where, when and often how a special education student will be provided a meaningful education specific to their needs. The IEP team can consist of the student (if appropriate), parents, regular and/or special education teachers, a school or school system representative, Therapeutic Support Staff (TSS) and Behavioral Specialist Consultant (BSC). For more information, visit the Pennsylvania Department of Education.

Loophole: The "loophole" eliminates family income as a factor in determining if a child is eligible for Medical Assistance for persons with Autism Spectrum Disorder.

Managed Care Organization (MCO): Nearly all of Pennsylvania’s Medical Assistance Services are provided through Managed Care Organizations (MCO).

MA: Medical Assistance, also known as ACCESS and Medicaid.

Medicaid: The same as Medical Assistance.

Medical Necessity: This represents a group of criteria used to find a person eligible for services. A person may have a condition, but must meet medical necessity criteria to be eligible for services, for instance wrap-around services under Medical Assistance.

MH/MR (Mental Health/Mental Retardation): The Mental Health and Mental Retardation Act of 1966 requires your county MH/MR office to provide community mental health services, including: short-term inpatient treatment, partial hospitalization, outpatient care, emergency services, specialized rehabilitation training, vocational rehabilitation, and residential arrangements.

Need: "Need" for services must be determined in both medical and educational law. If your child has autism, evaluations will confirm the diagnosis and identify any areas of need, whether they are educational, medical, or behavioral. Parent input is mandatory.

OBRA Waiver: A waiver is a federal funding stream that allows states to be exempt from (or "waive") certain requirements. The OBRA waiver is a funding stream regulated by federal law, generally designed for persons with developmental disabilities that substantially limit major life functions.

ODP (Office of Developmental Programs): Creating the new Office of Developmental Programs within DPW in 2007 was one of the core recommendations of the Pennsylvania Autism Task Force. In its initial stages, Office of Developmental Programs will house a Bureau of Mental Retardation Services and a Bureau for Autism Services, as well as necessary support bureaus.
OMAP (Office of Medical Assistance Programs): A program office located within the Pennsylvania Department of Public Welfare. For the purposes of people with autism, OMAP administers the joint state/federal Medical Assistance program that purchases health care for over 10,000 "loophole" children.

OMHSAS (Office of Mental Health and Substance Abuse Services): A program office located within the Pennsylvania Department of Public Welfare responsible for behavioral health services ranging from community to hospital programs with emphasis on helping children, adolescents and adults to remain in their communities.

OVR (Office of Vocational Rehabilitation): Located within the Pennsylvania Department of Labor & Industry. This office administers job/vocational training and coaching to persons with disabilities based on a model of temporary need.

PCP (Primary Care Provider): A specific medical services provider (doctor) responsible for providing primary care services and locating, coordinating, and monitoring other medical care and rehabilitative services (in addition to behavioral health services) on behalf of a Medical Assistance recipient.

PDE: Pennsylvania Department of Education.

Privacy: See also HIPAA (health records privacy) and FERPA (school records privacy).

Residential Habilitation: Learning behavior skills that may be ordinary household tasks or self-help. Self-help, also called personal care, refers to activities such as showering, shaving, toileting and dressing. Residential habilitation also includes learning to do household tasks, making meals and other activities you would do when you return home from work or other daytime activities.

Respite: Services provided to the family or caregiver of a person with autism so that they may have time to attend to sibling’s or other family member’s needs, to have time to go out to dinner, attend to personal appointments or simply relax. These may be in or out of home services.

Special Needs Trust: A legal financial entity established by parents of children with disabilities to provide for supplemental needs not covered by public assistance funds that cover basic needs. The fund is created because assets owned by a person with autism would prevent their eligibility for publicly funded services until the funds were gone. The trustee distributes funds from the trust to the person with autism for non-basic supplies. For more information, visit the Autism Society of America.

TSS (Therapeutic Support Staff): This person has a certain level of experience, education and training to support a person with autism one-on-one in settings found to require their support. This could include school, social functions and community.

Waiver: A waiver is a funding program where the state is allowed to "waive" certain requirements, usually of a federal law or program. In Pennsylvania, two waivers are most likely to serve a person with autism; the Consolidated Waiver, and the OBRA Waiver.

Wraparound: Wraparound or "wrap" refers to behavioral health services, such as Therapeutic Support Staff (TSS) and Behavioral Specialist Consultant (BSC) support, that "wrap" around other supportive services. Wraparound may include trained workers who support and intervene on behalf of a client to implement the client’s Behavioral Treatment Plan.

Last modified on: October 9, 2007

Related Therapy/Services

Children with autism may be evaluated for, or need a variety of services, including, but not limited to, speech, occupational, and physical therapy. You or your service provider may notice difficulties in any of these areas and request an evaluation.

Speech Therapy will address communication needs for the individual with autism. Depending on the needs, individuals will learn how to communicate, interpret and express verbally and non-verbally, and engage in socialization or play skills.

Occupational Therapy (OT) can address fine and/or gross motor skill deficits that are needed for daily living or academics. An occupational therapist may also help to address sensory difficulties. Sensory integration is the way the body takes in and processes environmental stimuli. Often children with autism have difficulties with how they process incoming sensory information. You may see sensitivities to noises, smells, foods or clothing. Your child may want to swing or spin incessantly. We all have sensory issues. Individuals with autism have them much more intensively.

Physical Therapy (PT) is used to address significant delays with gross motor, and sometimes fine motor skills. Children may have low muscle tone, which could create difficulty with walking, sitting, or performing academic functions.

Individuals with autism may receive more than one of these therapies depending on his or her needs. Some parents receive services through their educational program and take their child to additional outside therapies. It is important to remember that your child will only qualify for these services in the school setting if their needs are educationally based (ex: trouble with getting on/off the bus, interacting or performing daily functions in the school setting, etc.) Any therapies or services that are a part of your child’s IEP at school will not be charged to you or your insurance.
Wraparound or BHRS Services

What are "wraparound" services?

"Wraparound" is a nickname for Behavioral Health Rehabilitation Services (BHRS), which "wrap" around existing services. BHRS is a Medicaid-funded program providing trained professional support for children under age 21 to reduce or replace problem behavior with positive, socially appropriate behavior. Wraparound services are family and child-centered, and they can take place in variety of settings, not just one place. Services are defined by the Behavior Treatment Plan, or Behavior Care Plan. Progress is monitored with data, updated regularly and reevaluated every three months. Also, wraparound services are often very personal. Some families may need to adjust to new persons actively joining their daily activities.

How are services decided?

The Behavior Treatment Plan is the plan developed by a team representing several support agencies. This team includes parents, any lead teacher, a Behavior Specialist Consultant (BSC), any services coordinator, any therapist or counselor, and any person(s) the family wishes, including an advocate. If appropriate, your child is included. The plan includes goals, objectives, and treatments. Goals may target safety, functional, communication, social and classroom behavior and each member of the team is assigned responsibility to help meet the goals. Goals are individual to the needs of your child and family, and are updated as often as every three months.

Who provides services?

Wraparound services are usually provided directly to clients by Therapeutic Staff Support (TSS), Therapeutic Staff Support Assistants (TSSA), a Behavior Specialist Consultant (BSC) and a Mobile Therapist (MT), who work for a local agency. Your community may have several agencies, but not all of them may serve children with autism of your child’s age.

When and where do services occur?

The Behavior Treatment Plan includes the prescription for "level of care," or the treatment hours assigned each week to TSS, MT and BSC, and in which setting. Settings often include school, camp and/or home.

What do services look like?

TSS and TSSA provide one-on-one service. For instance, your child’s therapist may instruct a child on how take turns using cards, a worksheet, games, checklists, scripts and other strategies. The TSS and TSSA may then prompt the child to practice that skill in natural settings such as circle-time, recess or during a play date. This instruction may occur at your home and be practiced there, and at some point with other children. The
TSS or TSSA take data and record treatment notes to measure the client's progress toward independent use of the skill. The BSC regularly reviews these notes to adjust treatment and goals as needed.

**How can my child get services?**

Contact your county MH/MR office [HCSIS Services and Supports Directory](#) and request wraparound services. Your child must be found eligible for wraparound services by a local agency. Families should contact agencies and determine which may have the best experience and staff for their child’s needs.

**What wraparound is not**

Wraparound services are medically necessary services. Wraparound is not a substitute or supplement for speech and language, occupational or physical therapies. Wraparound is not a substitute for academic instruction by a teacher.

For details Visit our glossary for the definitions of acronyms and words used in this section. In addition, your Behavior Health Managed Care Organization (BHMCO) likely has printed materials and a Web site designed to help you understand their wraparound services and complaint process.

**Why does my child need wraparound services when I already have education services?** There are similarities between wraparound services and education services. However there are important differences because the long-term goals of these two systems are different. School services are designed to meet the goals of [IDEA](#), a federal education law that focuses on functional and academic skills that prepare a student for independent living, a job or further education. Wraparound services focus on community integration and skill development to increase the independence of individuals and their families. See our page on wraparound or Behavioral Health Rehabilitation Services (BHRS) for details.

Parents Right’s

Parents are valuable members in their child’s educational process. State and Federal laws are put into place to protect individuals with special needs. Parents have certain rights when it comes to their child’s education. Schools will provide you with rights in the form of Procedural Safeguards. Make sure you read these rights. A copy of these rights can be obtained online @ http://www.parent.pattan.net under the opportunities for resolving disagreements link. If you need help understanding these rights you may ask to have them explained to you. An excellent source for understanding the special education process is the Pennsylvania Parent Guide to Special Education for School Age Children. This document can be ordered through the Pennsylvania Training and Technical Assistance Network (PATTAN) @ 610-265-7321. There is no charge for this document. For questions regarding educational law or issues you may call Pennsylvania’s Department of Education @ 717-783-3750. For more information concerning IEP meetings and development of IEP visit WrightsLaw to view, “8 Steps to Better IEP Meetings : Play Hearts, Not Poker.” @ http://www.wrightslaw.com/advoc/articles/iep.bollero.hearts.htm

K.A.R.E Resource Guide
Family & Support Information
Build and Develop Your Support Team

Build and Develop Your Support Team: Guidance for Parents of Children Recently Diagnosed with Autism

You are not alone in facing the challenges of raising and caring for a person with autism. Addressing the needs of a person with autism requires a team effort. Dedicated and experienced professionals throughout Pennsylvania can help. Your support team can also expand in several directions, depending on your own family and social networks and the type of contact your child has with others outside the home.

As a parent you are the best person to develop and manage the support team on behalf of your child, to help him or her reach their maximum human potential. Your support team may include people who have the most direct contact with your son or daughter with autism:

- Your son or daughter with autism is part of the team
- Both parents: you and your spouse and/or partner
- Your child’s brothers and/or sisters
- Your child’s doctor
- Your child’s other medical specialists
- Your child’s psychiatrist or psychologist (who evaluates developmental, academic and functional skills over time)
- Your Support Coordinator(s) (assigned by county MH/MR and other programs)
- Your child’s teachers, both general education and special education
- Your child’s therapists, whether private or provided by your school
- Other family members
- Your child’s behavior specialist and Therapeutic Staff Support (TSS) person (if your child is receiving wraparound care)
- Any privately paid behavior specialists

Your support team may include also people who may have casual or indirect contact with your son or daughter with autism:

- Your child’s school principal
- Your child’s bus driver(s)
- An advocate
- Assigned Managed Care (MCO) Special Needs Unit caseworker
- Medical Assistance caseworker
- Your child’s dentist and oral surgeon
- Other medical service providers
- Community members (librarian, chief of police, fire chief)
- Your family attorney
• Your neighbors
• Camp directors
• Your local pharmacist
• Sitters and Respite Care workers

Some parents have found it helpful to begin building the team by obtaining contact information for each person in one notebook or folder, perhaps by taping their business cards to the cover. When you obtain new documents that report on or recommend changes to your child’s services or needs, consider making copies and sharing the document with others on the team. To keep the team making informed recommendations, arm them with other’s knowledge. For instance, when your child goes to the pediatrician, consider bringing a copy of the latest psychological evaluation and discuss it with the doctor. In an emergency, members of your support team will already have crucial documents in their file.

You may wish to keep one folder of all important originals and add to it as necessary. Consider the following as your child’s important documents:

• Birth Certificate
• Social Security Card
• Proof of citizenship, if necessary
• Dental records (most recent checkup and last completed school exam form)
• Vision and hearing records and evaluations, copy of recent prescription
• Vaccination records
• Documentation of diagnosis
• Behavioral Health Treatment Plan
• Educational and psychological evaluations
• Reports from medical specialists
• Copy of your insurance cards
• Copy of your child’s Medical Assistance Card and any other cards
• Recent photo
• Most recent Individualized Education Plan (IEP) or IFSP
• Any disciplinary records
• High school transcript
• Diploma or Certificate of Attendance
• Most recent prescriptions, if any
• Any special tests (EEG, GI, etc)
• List of any special dietary or biomedical interventions
• Back up copy of instructions for any AAC device

Special Notes: Support Coordinators have specific roles in assisting your son or
daughter, roles defined by the Medical Assistance program. They can be very helpful, if you are aware of what they can do and ask. Support coordinators can:

- Help you make informed decisions by explaining benefits and detailed information that is confusing.
- Help you manage services by working with your son or daughter to identify, facilitate, monitor and coordinate services to maximize benefits for your child.
- Help you gain access to other benefits that may be available through state, federal or local sources. These include medical, social, educational, assistive technology, respite and other services.
- Be your advocate by ensuring your child has maximum input and benefit in obtaining local resources, they can make calls and attend meetings with you or your child.
- Help you begin and coordinate any required re-evaluation in a timely, efficient manner.
- Ensure that your child’s Individual Service Plan (ISP) is comprehensive and meets your son or daughter’s needs.

Your child’s doctor may also be his or her Primary Care Provider, chosen through your Managed Care Services of Medical Assistance. Your doctor should be kept informed of all changes in medical or educational condition or services. Your doctor is required to prescribe any occupational speech or physical therapy evaluation and treatment services.

If you have suggestions about how to improve the information contained here, please contact DPW Communications Office: DPW-Communications@state.pa.us.

About.com

Author: Lisa Jo Rudy

Now that you know your child is autistic, you may be feeling isolated, scared, or just plain baffled. If so, you're not alone -- other parents have "been there and done that." Here are just a few hints and tips for managing these first few weeks and months, from parent readers of the Autism.About.Com site.

Learn About Autism

Educate! Educate yourself, your relatives, and anyone who is around your child. Look at both sides of the story. The first thing I found was an overwhelming assortment of stories detailing the horrors of autism. There are just as many positive stories out there. Look for them and focus on the positive. Read about and listen to people on the autism spectrum. They know more about what it’s like to be autistic than we do. There are numerous websites and forums for autistic individuals. I’ve gotten lots of great advice from them.

Learn About Therapies for Autism While Maintaining a Balanced Life

Learn about different therapies. Know what is being done to your child! Keep in mind that a certain therapy may not work for your child. That is okay, just try something new. Also, don’t make everything therapeutic. If you turn play into work, it will remove the joy from it. Try not to overwhelm your child (and your family, and yourself) with therapies. While therapy may be important, keep in mind that juggling numerous therapy schedules and home life is tedious at best. It cannot rule your life.

Find Help and Advice, and Select What Works for You

When your child is of school age, work with your classroom teachers and your school district special needs representative. A good relationship will go a long way. There is a ton of assistance out there. Most states have chapters of the Autism Society of America, and you can usually get an autism advocate to assist you with decision-making. Also, find out if you have a Disabilities and Special Needs Board. You can get a representative for your child and yourself. Our representative has been a lifesaver when we are overwhelmed or when we have needed an advocate. Just like when you were pregnant, you will be given lots of advice from many different sources. You don’t have to take all the advice. Consider it and follow what you feel is right.

Respect, Love and Learn From Your Child

Respect your child’s boundaries. For example, if your child hates the way fleece feels, don’t force it on them. Put it aside and try again later. Same goes for food and play. Make sure your child knows that you love him or her. Don’t be embarrassed if your child plays differently than the children around her. It is how it is. If a curious parent or child asks, tell them. Autism is nothing to be embarrassed about.
Read Helpful, Inspirational Poems and Books

“Welcome to Holland” by Emily Perl Kingsley sums things up quite nicely and it was a turning point for me after my son’s diagnosis. One of the best books I read when I was going through the same tough times that you may be right now is called Overcoming Autism by Lynn Koegel and Claire Lazebnik. It is such a practical book and always leaves me feeling encouraged. You don’t have to read it all in one sitting. You can pick out the chapter that applies to your current challenge and take it from there. I can’t tell you how much this book helped me in those first days.

Be Patient; Be Positive

Many kids seem severely autistic at a young age, and then become very high functioning when they grow older. So keep a positive attitude and remember, it takes time. Be patient. Learn to appreciate and love your child in her quirkiness. It’s like learning a different language, a different culture. You have to respect her as a different human being, and not see everything she does in a negative light. Don't underestimate what she is capable of doing or understanding. There are several cases of severely autistic people who learned to express their feelings through typing, and blew everyone away with their intelligence. Be patient and gear up for this long journey. You may be surprised about the good things that will come your way.

Help Your Child Build On Her Strengths and Interests - Not Yours

Ask yourself why it bothers you that she doesn’t want to kiss her doll or prefers to collect toys rather than play with them. Many great researchers started with the same behaviors. Maybe one day she’ll make new discoveries that will wow the world because rather than hanging out with her friends at the mall, or she’ll prefer to collect and classify specimens she finds in the yard playing on her own. You have a great independent mind in her. And so you will help her develop that.

Hire the Best Therapists

You should know that often times the therapist Early Intervention sends over aren’t always the best, but the ones who are available. I’d keep a close eye on their effectiveness, and consider hiring your own.

Consider Changing Your Child's Diet

Food sensitivities can make a tremendous difference in a child’s life… physically, emotionally AND cognitively. Try the GFCF (gluten-free casein-free) diet. Also, many parents who did not experience success with the GFCF diet now swear by SCD (Specific Carbohydrate Diet).
**Give Yourself the Time and Space You Need**

Give yourself permission to grieve! You have lost the child you thought you’d have, as surely as if she was here and then died. She didn’t physically die, but your idea of her did. So grieve -- feel bad. It’s OK. At the same time, though, get to know this wonderful new person you received in your “ideal” child’s place. Slowly, over time, your memories of that “other” perfect child you thought you were getting will become more distant and less significant, to be replaced with the wonderful memories you will make. Give yourself permission to take a break from everything on a regular basis. Having someone babysit for you once in awhile so you can do something that’s all you will help decrease your stress.

**Love Your Child As He Is**

The one most important thing I have learned is to love your child as they are. You must fully accept them the way they are. That feeling of complete acceptance they will receive from you will help them more than anything. Our son has done all the therapies but his progress did not go speeding ahead until I fully accepted him as he was. Then, with a feeling of full acceptance and love, his progress took off. I also was much more at peace.

©2008 by Lisa Jo Rudy (http://autism.about.com/od/newtoautism/tp/Tips-for-Parents-New-to-Autism.htm). Used with permission of About, Inc. which can be found online at www.about.com. All rights reserved.
Siblings

Siblings are valuable friends and playmates for your child with autism. The decision of what to tell siblings and how much is a personal decision each family must make. Of course, part of this decision is based on age of the siblings. Children (as well as adults) are often afraid of what they do not understand. Parents will serve as important teachers to open the doors for future patience, understanding, and acceptance. There are resources to help families and siblings. Below are a few suggestions:

2. Sibling Stories: Reflections on Life with a brother or Sister on the Autism Spectrum-Feiges, Weiss, Harris
3. Everybody is Different: A Book for Young People Who Have Brothers or Sisters with Autism- Fiona Bleach
4. Me, My Brother and Autism-A. Phalon

If you have an older sibling there are sibling support groups available for them in the area. Support groups such as ABOARD, Autism Link, FBR, and the Wesley Institute will be able to provide more information on these groups. Contact information for these organizations can be found in this resource guide.

Law Enforcement and Autism: a 101 course for Parents

- **Police Officers are in the business of helping people.**
  The majority of them went into this field because they wanted to make a difference and help others. When the civilians and Police Officers work together they can solve problems and make their communities better for everyone.

- **Get to know your local Police Officers.**
  Call and ask them to stop by when they have time to get to know your family and your child. They will be happy to do that. Getting to know who is in their community is important part of a police officers job. Introduce yourself and your child to them at local public events. Work with your school and police department to start the “Utilizing Police in the Schools” Program that can be found at [www.papremisealert.com](http://www.papremisealert.com) It is free and easy to start. It is the most effective, least expensive training program you will ever see.

- **Teach your children that Police Officers can help them.**
  Individuals with autism are very concrete thinkers. They are going to need to know that if they are ever in trouble to go to a person in uniform and ask for help. Do not threaten your child with arrest or jail if they don’t do their homework, refuse to clean their room or decide not to go to school. Those are issues to work through with your IEP team or Behavior Specialist. The police are the people they are going to need to feel safe approaching when they are in the community.

- **Teach your child to provide identifying information to Officers**
  Start teaching your children to give their name, address and phone number as soon as they are able. If they are nonverbal, teach them to show an ID card or American Sign Language. Even if the Officer cannot Sign, he/she will understand that there is a special need.

- **Teach your child how to safely approach a Police Officer.**
  When a child is young, say up to 6 years of age, a police officer will easily be able to recognize the excitement of a child around his/her uniform or car but as the child ages the behaviors will appear to be menacing. It is important to teach children to walk up to an officer, not run at them. Also teach them to keep their hands out of their pockets and not reach for the officer’s badge, gun, or flashlight.

- **Provide information before a crisis.** Check out this website [www.papremisealert.com](http://www.papremisealert.com) Download a form, fill it out, and take it to your local Police Department. You can print out directions for Police Departments as well and ask them to help you out.

- **Always disclose your condition to an Officer.**
  You and your child should disclose the diagnosis as soon as possible. Teach your child to carry an ID card or Medic-Alert Bracelet so that in the event of a crisis and the child or adult is unable to speak or give his or her information the police will be able to know that there is a diagnosis to be considered.
• **Families of children with autism are not immune from abuse**
  If an Officer or hospital worker takes time to investigate the possibility that your child has been abused due to bruises or scars from self-injurious behaviors, try not to be offended. They are working to protect your child. They don’t know you or your family they have to go off of what they are seeing. It is good that they care enough to look twice. Provide a copy Autism 101 for Mandated Reporters to your local police, it can be found on our website.

• **When you call the Police, they will come**
  I know that sounds pretty basic but realize that when you call the police they will come and do what they need to do to contain the situation. Parents need to understand what that means. When the Police have trouble they have no one to call, except for more police. Most times and most interactions end well with the situation being resolved without physical contact or further action, but your child may be arrested, may be handcuffed or tasered if necessary. Your child may be subject to an involuntary psychiatric commitment that will last no less than 3 days.

• **Learn the number for your County Crisis Intervention Team.**
  They work under the department of Mental Health and they are a resource that may be helpful to you and your child in the event of a behavioral or mental health crisis. Work to make sure they have the training and expertise to help during a crisis. Call your local Department of Mental Health to get the phone number, add it to your cell phone director and emergency numbers for care providers. In Pennsylvania check our website to find the number for every counties Crisis Intervention Hot Line.

• **Police Officers are not doctors, psychologists, or Behavior Specialists.**
  We are truly fortunate in Pennsylvania that by the end of 2008 every police officer in the state will have received autism training. That does not mean they can diagnose, recognize it on the street, or use perfect de-escalation techniques. Their training will give them a thumbnail sketch of the disability and some suggestions to improve interactions. An Officer’s job is far more complicated and involved than dealing only with individuals with autism. The training is to provide some insight and techniques that should improve understanding and interactions. For more information on the autism specific training contact Dennis Debbaudt at [www.autismriskmanagement.com](http://www.autismriskmanagement.com)

• **Autism is NOT a get out of jail free card.**
  People with autism can form intent and commit crimes; many cannot and so need to be treated in a different manner. If someone who cannot form intent repeatedly causes harm or damage in the community it may be in their best interest for them to be placed in a setting that will allow them appropriate freedoms and supervision to remain safe and keep the public safe as well. It is critically important to access all available resources for assistance such as a county or state agency that provides support services, community advocacy groups and support groups to find information on how to best protect your child or adult child.

Office of Vocational Rehabilitation
OVR provides services to eligible persons with disabilities with the goal of getting or keeping competitive employment. You will be eligible for OVR services if: You have a disability that is physical, mental, or emotional impairment which results in a substantial impediment to employment, and you can benefit in terms of an employment outcome from services provided, and , Vocational Rehabilitation services are required for you to prepare for, enter, engage in or retain gainful employment. A Vocational Rehabilitation Counselor will determine eligibility.
OVR provides a wide range of services to eligible applicants. The individual being served and the vocational rehabilitation counselor develop an Individualized Employment Plan jointly. The services you receive will be arranged to meet your individual needs. Not
everyone will need every service. OVR services include: diagnostic services, vocational
evaluation, counseling, training, restoration services, placement assistance, assistive
technology, and support services. There is no charge for diagnostic services, counseling
and job placement. However, a customer maybe required sharing the cost of other
services after a financial needs assessment is completed.
Additional information , including local OVR office locations can be found on
www.dli.state.pa.us, click on disability services. Also find OVR offices across the state.

Website: [https://www.humanservices.state.pa.us/compass/CMHOM.aspx](https://www.humanservices.state.pa.us/compass/CMHOM.aspx)

Health Law Project
In Pennsylvania there is the possibility of receiving Medical Assistance under Category PH 95, aka “loophole” for your child with autism. Through PH 95, parent income is not a factor. To view a complete document explaining why you may want to consider Medical Assistance, Qualifications, and the Application Process, please visit the website below or call the Health Law Project at 1-800-274-3258

There is a wealth of valuable information on the internet. Please be aware that unfortunately, there are also those who may take advantage of families that have members with autism. The purpose of our website listings is to provide reliable sites recommended by parents and professionals, so that families can obtain information and find support that is needed. All of the websites are current at the time of press. These sites are not intended to serve as endorsements, only to provide places to retrieve needed information. If you do not have a computer or internet access at home many local libraries provide both services free of charge. If you have a laptop many coffee shops, restaurants, and even McDonald’s provide free or low cost internet access.
WEBSITES

www.aap.org
American Academy of Pediatrics (AAP)
