Screening and Response Protocols; Contact Tracing

Screening
Students - Entering Campuses
- Parents/Guardians will be asked to screen students before they leave for school. Screening will include checking for temperature above 100 degrees Fahrenheit, symptoms of COVID-19, and/or if the student(s) had close contact with a person diagnosed with COVID-19. Parents/guardians will be instructed to keep the student home in the event of a positive to any portion of the screening points and to notify the school at the earliest opportunity.
- All students boarding a school bus will be greeted by the bus driver/monitor. The greeting will include confirmation that the student is properly wearing a mask.
- Upon arrival at the school, all students will have their temperature checked as they enter the school building. Any student exhibiting symptoms of COVID-19 or having a temperature reading over 100 degrees Fahrenheit will be immediately referred to the nurse.
- All students will use hand sanitizer as they enter the school building.

Students - Entering Classrooms
- Supervisory personnel, i.e. teachers will report any student they suspect having symptoms of COVID-19 to the school nurse. The supervisory personnel will notify the nurse prior to sending the student to the designated location.
- Students will either wash their hands or use hand sanitizer upon entering and exiting a classroom.

Staff—Entering Campuses
- All Port Jervis City School District personnel will complete the COVID-19 questionnaire and send to appropriate supervisor before coming to work each morning (Appendix B- COVID-19 Health Questionnaire)
- All staff must wash or sanitize hands as they enter the school building.
- All staff may be subject to temperature scans.

Suspected or Confirmed COVID-19 Protocols
If a student is symptomatic while entering campus or during the school day:
- Students/staff who develop symptoms of illness while at school should be separated from others immediately. Students will report to the supervised Isolation Room until they can be transported to their residence by an authorized adult.
  - Each school building will have a designated Isolation Room that is separate from the Nurse’s Office. This room will allow for physical distancing and barriers to be implemented, if needed. This room will be supervised by school personnel when occupied.
- Any students or staff exhibiting symptoms should be required to immediately wear a face covering and wait in an isolation area until they can be transported home or to a healthcare facility.
Staff or the parents of applicable students will be advised that they are not to return until they have met CDC criteria to discontinue home isolation.

Response Protocols

Regional or Community Surge in COVID-19 Cases

The Port Jervis City School District Reopening Plan allows for a clearly defined progression of instructional models to allow for a fluid response to increase or decrease restrictions and guidelines from state and local health officials. The District has a plan to close schools again for physical attendance of students, if necessary, based on public health guidance and in coordination with local public health officials.

Positive COVID-19

In accordance with NYS Department of Public Health guidance, when a student, teacher, or staff member or a member of their household tests positive for COVID-19 and has potentially exposed others at the school the following steps will be implemented:

- The District will contact the Orange County Commissioner of Health.
- In consultation with health officials, the individual will be isolated from the school building until cleared for return.
- School officials will determine all individuals that may have been exposed to the student, staff member, or teacher.
- School officials will determine all areas of the educational setting that may have been exposed including but not limited to school transportation, offices, classrooms, and restrooms.
- The District will follow all directives and guidance from the Department of Health and School Physician. These protocols may include isolation of other students and/or staff members that may have been exposed and the temporary closing of office or classroom spaces until cleaning and disinfecting procedures are complete.
- The plan for the continuation of instruction, medical, food distribution, and support services will be communicated to any individuals that are in isolation.

CDC Guidelines for Returning from Isolation

Potential Symptoms of COVID-19

In accordance with NYS Department of Public Health guidance, when a student, teacher, or staff member is reporting, suspected of, or exhibiting symptoms of COVID-19 and has potentially exposed others at the school the following steps will be implemented:

- Any students or staff exhibiting symptoms will be required to immediately wear a face covering.
- The individual will be referred to the school nurse (Registered Nurse) and will be immediately separated from others.
- Students will report to the supervised Isolation Room until they can be transported to their residence by an authorized adult (if directed to do so by the school nurse.)
  - Each school building will have a designated Isolation Room separate from the Nurse’s Office allowing for physical distancing and barriers to be implemented, if needed. This room will be supervised by school personnel when occupied.
- The individual will be isolated until able to leave the premises.
Staff or the parents of applicable students will be advised that they are not to return until they have met CDC criteria to discontinue home isolation.

- The applicable area(s) will be vacated and closed until cleaned and disinfected.
- The District will contact the Orange County Commissioner of Health.
- School officials will contact the parents/guardians, if applicable.
- School officials will determine all individuals that may have been exposed to the student, staff member, or teacher.
- School officials will determine all areas of the educational setting that may have been exposed including but not limited to school transportation, offices, classrooms, and restrooms.
- The District will follow all directives and guidance from the Department of Health and School Physician. These protocols may include isolation of other students and/or staff members that may have been exposed and the temporary closing of office or classroom spaces until cleaning and disinfecting procedures are complete.
- The plan for the continuation of instruction, medical, food distribution, and support services will be communicated to any individuals that are in isolation.

**Return to School after Illness**

The established protocols and procedures, in consultation with the local health department(s), about the requirements for determining when individuals, particularly students, who screened positive for COVID-19 symptoms can return to the in-person learning environment at school. This protocol includes:

- At least three days (72 hours) have passed since recovery – defined as no fever without the use of medications and improvement in respiratory signs like cough and shortness of breath.
- At least 10 days have passed since signs first presented.
- Documentation from a health care provider following evaluation permitting a return to school or work.
- Negative COVID-19 diagnostic test result

**When You Can be Around Others After You Had or Likely Had COVID-19**

"Interim Guidance for Public and Private Employees Returning to Work Following COVID-19 Infection or Exposure”

**Protocol for Returning to School Following Isolation**

A staff member or student who had signs of suspected COVID-19 can return to the program when:

- It has been at least three days (72 hours) since recovery AND a health care provider has certified that the student does not have suspected or confirmed COVID-19.

**Suspected Exposure Protocol**

If a person believes they have had close contact with someone with COVID-19, the person should self-quarantine even if they are not sick. Individuals should watch their health for signs of fever, cough, shortness of breath, and other COVID-19 symptoms during the 14 days of
quarantine, beginning with the last day they were in close contact with the person sick with COVID-19. They should not go to work, child care, school, or public places for 14 days pending clearance from their healthcare provider and satisfaction of all Department of Health Guidelines.

Protocol for Addressing Work Areas, Classroom Spaces

Following the identification of a suspected or confirmed case of COVID-19, all applicable facilities and locations will:

- Be vacated and closed off until cleaning and disinfecting protocols have been completed.
- Have windows and doors opened to the extent practicable to increase air circulation in the area.
- Not be reopened for use until cleaning and disinfecting protocols have been completed and approved for reopening by the Superintendent or designee.

Attachment: Contact Tracing FAQ's from the Orange County Department of Health
Please note schools are required to adhere to the NYSDOH guidance (attached hereto).

Q1: When and how should we report positive COVID-19 cases to OCDOH?
A. Immediately notify OCDOH if a student, faculty, staff member or volunteer tests positive for COVID-19 at 845-291-2330, 24 hours a day / 7 days a week.

The OCDOH will maintain a list with contact information for two point of contact individuals within each school (1 school nurse and 1 administrator) to discuss issues pertaining to COVID-19. Please provide that updated information to epidemiology@orangecountygov.com

Q2. Are schools responsible for contact tracing for students, faculty and staff?
A. Contact tracing is an important component to reduce the spread of COVID-19. Effective contact tracing is a joint collaborative effort which will require the assistance of schools in providing staff and student lists, schedules, and other information to identify exposed individuals. Hence, it is imperative to confidentially maintain sign in logs with full contact information (name, address, phone number, e-mail address) of all individuals presenting to any of the facilities. See attachment for an example sign-in log and a copy of the Orange County contact tracing spreadsheet for schools.

Q3. Will contact tracers release the name of the positive individual to their contacts?
A. No. Contact tracers will tell potentially infected persons that they were exposed. They will not disclose the identity of the person to whom they were exposed.

Q4. How long will contacts to positive COVID-19 cases be required to quarantine?
A. Individuals who are exposed to someone with COVID-19 will be required to quarantine for 14 days from the day they were last exposed. Please note that a negative test does not release an individual from quarantine.

Q5. When should an exposed individual get tested for COVID-19?
A. Testing after exposure is a decision between the individual and their primary care provider (PCP). The exposed individual must contact their PCP to schedule testing. Exposed individuals must remain on quarantine until being tested and must immediately return to quarantine following such testing. If a person tests positive, they will be placed in isolation (for a period determined by the OCDOH). Even if the test is negative, the individual must continue to quarantine for the full 14 days.

Q6. Where can students, faculty and staff get tested for COVID-19?
A. Students, families, faculty and staff are encouraged to contact their primary care provider (PCP) first to schedule testing, in order to preserve the continuity of care.
A list of testing sites can be found on the OCDOH health website found here: https://www.orangecountygov.com/1949/Anti-Body-Testing or by calling the Orange County COVID-19 Hotline at 845-291-2330.

Students, families, faculty and staff can also download the Orange County NY Health mobile app available free of charge from the Google Play/Android and Apple app stores. Students, families, faculty and staff can also call the NYSDOH COVID Hotline at 1-888-364-3065 for assistance locating a testing site.

Q7. Is there a charge for COVID-19 tests?
A. Insurance information may be requested at some testing facilities including healthcare provider offices and pharmacies. There is no out of pocket charge for COVID-19 tests conducted at state-run facilities. The closest state-run facility is Rockland Anthony Wayne Recreational Area Palisades Parkway located at Palisades Interstate Pkwy Exit 17, Bear Mountain, NY 10911. More information can be found here: https://coronavirus.health.ny.gov/find-test-site-near-you.

Q8. When can a person who has tested positive return to school? Is it the same process for students, faculty and staff?
A. An individual who tested positive must obtain written clearance from their primary care provider (PCP), that complies with CDC guidance for the return to school of students, faculty, and staff following illness or diagnosis of a confirmed case of COVID-19 clearance criteria include but may not be limited to the following CDC guidelines: https://www.cdc.gov/coronavirus/2019-ncov/hcp/disposition-in-home-patients.html.

Q9. Can we assume that students with antibodies are safe from contracting COVID-19?
A. No. We do not have enough information about whether antibodies protect individuals from re-infection and how long antibodies may provide protection. Antibody tests also CANNOT diagnose if an individual has active infectious COVID-19. A positive result can mean you had infection with COVID-19 in the past.

Q10. Are rapid tests (Antigen or Molecular) reliable?
A. Rapid tests provide results in under an hour, though they have a high rate of false negatives. Negative rapid antigen tests which are the most commonly performed rapid COVID-19 test cannot rule out COVID-19 and should be followed up by a molecular test. Please see the attached FDA Coronavirus Testing Basics fact sheet or find it here: https://www.fda.gov/media/140161/download.

Q11. Do individuals coming back from vacation from states on Governor Cuomo’s travel advisory need to quarantine?
A. Yes, individuals who are coming to New York from any of the states on the travel advisory need to quarantine for 14 days. The most up-to-date list of states is available here: https://coronavirus.health.ny.gov/covid-19-travel-advisory.

Q12. What qualifies as an exposure to COVID-19? How does the DOH define “close or proximate contact”? The CDC suggests 6 feet or less for a duration of 15 minutes or more. Does that hold true here?
A. Close contact is defined (by NYSDOH and Johns Hopkins) as being within 6 feet of a person displaying symptoms of or testing positive for COVID-19 for 10 minutes or longer. Close contacts will be required to quarantine. Proximate contact is defined as being in the same enclosed environment such as an office, but greater than 6 feet from a person displaying symptoms of COVID-19 or testing positive for COVID-19. OCDOH will determine if a proximate contact should be under quarantine.
However, bus rides and classrooms are more congregate settings than the general guidelines consider, and it is prudent to consider **any individual in the same classroom as a close contact.**

**QUARANTINE & ISOLATION CLARIFICATIONS**

Q13. Why is the isolation period for an infected person shorter than the quarantine period of a contact?
A. The time period for *incubation* is different from the time period of illness and *infectiousness*. When a person is exposed to COVID-19, it can take anywhere from 2-14 days for the person to develop the disease (*incubation*), hence the **quarantine** period is 14 days. Once the disease develops, a person is *infectious* from 2 days prior to symptoms appearing to, **at minimum**, 10 days after the symptoms develop, hence the **isolation** period is at minimum 10 days, but can be longer.

Q14. Can you leave quarantine for a COVID-19 test or does your quarantine start all over after you went out to get that test?
A. Yes, you can leave quarantine for a COVID-19 test; however, during travel to and from testing you should **minimize contact with others, wear a mask/face covering, observe distancing and utilize private means for transportation**. No, your quarantine period does not re-start. However, even if you test negative, you must continue to quarantine until the full 14 days from the last exposure to a COVID-19 positive individual.

**CONTACT TRACING QUESTIONS:**

Q15. In the event there is a large exposure, what is the plan if the DOH gets overwhelmed with the case load once school starts?
A. The Orange County Department of Health has been working in conjunction with the New York State Department of Health on contact tracing, using a joint system for tracking cases and contacts. This system also allows for both the county and state to have increased capacity of contact tracing should it be needed.

Q16. How do those testing positive at sites or who live outside of Orange County or NYS integrate into the NYSDOH systems?
A. Lab reports from ‘out of jurisdiction’ are transferred and reported to the state/county of residence (of record) of the individual. For instance, if an Orange County resident tests at a location in New Jersey, that lab result is reported to the New Jersey Department of Health, who transfers it to New York State Department of Health, and subsequently the Orange County Department of Health. It is **imperative** to make sure your current phone and address are correct at a testing location, so the results can be reported to the correct jurisdiction and local health department can follow up with communication.

**QUESTIONS RELATED TO HOUSEHOLD CONTACTS**

Q17. If a child tests positive and has a sibling in the school, should the school keep the sibling out of school?
A. Yes. Unless the siblings reside in separate households, the sibling must be placed on quarantine which would mean that the sibling should not attend school during the required period for quarantine.

Q18. If a student/staff member is home on quarantine and then develops symptoms, please explain how that impacts attendance to school/work. What does it mean for the siblings that may have been continuing to go to school?
A. If a student or staff tests positive, their household members will likely be considered close contacts and will need to quarantine. Students or staff testing positive will require isolation for a minimum of 10 days.
Q19. If someone has to quarantine and has a family member in isolation is it 10 days + 14 days for the quarantine. Or would it be 4 more days?
A. Determining quarantine periods can vary depending on the particular situation; the specifics will be determined in conversation with the Orange County Department of Health case investigators and contact tracers. Here are some sample scenarios (CDC: https://www.cdc.gov/coronavirus/2019-ncov/if-you-are-sick/quarantine.html).

General Scenario 1: Close contact with someone who has COVID-19—will not have further close contact
I had close contact with someone who has COVID-19 and will not have further contact or interactions with the person while they are sick (e.g., co-worker, neighbor, or friend).
Your last day of quarantine is 14 days from the date you had close contact.  
\[ \text{Date of last close contact with person who has COVID-19 + 14 days = end of quarantine} \]

General Scenario 2: Close contact with someone who has COVID-19—live with the person but can avoid further close contact
I live with someone who has COVID-19 (e.g., roommate, partner, family member), and that person has isolated by staying in a separate bedroom. I have had no close contact with the person since they isolated.
Your last day of quarantine is 14 days from when the person with COVID-19 began home isolation.  
\[ \text{Date person with COVID-19 began home isolation + 14 days = end of quarantine} \]

General Scenario 3. Under quarantine and had additional close contact with someone who has COVID-19
I live with someone who has COVID-19 and started my 14-day quarantine period because we had close contact. What if I ended up having close contact with the person who is sick during my quarantine? What if another household member gets sick with COVID-19? Do I need to restart my quarantine?
Yes. You will have to restart your quarantine from the last day you had close contact with anyone in your house who has COVID-19. Any time a new household member gets sick with COVID-19 and you had close contact, you will need to restart your quarantine.  
\[ \text{Date of additional close contact with person who has COVID-19 + 14 days = end of quarantine} \]

General Scenario 4: Live with someone who has COVID-19 and cannot avoid continued close contact
I live in a household where I cannot avoid close contact with the person who has COVID-19. I am providing direct care to the person who is sick, don’t have a separate bedroom to isolate the person who is sick, or live in close quarters where I am unable to keep a physical distance of 6 feet.
You should avoid contact with others outside the home while the person is sick, and quarantine for 14 days after the person who has COVID-19 meets the criteria to end home isolation.  
\[ \text{Date the person with COVID-19 ends home isolation + 14 days = end of quarantine} \]

School Scenario 1: A staff member who has no contact with a student but has contact with other staff who had contact with a student that tested positive. The consideration is whether someone is a direct contact. The staff member with direct contact to a student that tested positive would be a direct contact and would need to go on mandatory quarantine for 14 days. The staff member without direct contact would not need to quarantine.

School Scenario 2: A staff member or a student has a positive case in their household. The staff or student has contact with other staff, faculty or students. The staff member or student should quarantine and monitor symptoms. Testing should be a decision between the exposed individual and their healthcare provider. If the individual becomes positive, contact tracing would identify students or other staff that would be direct contacts and those individuals would be placed on quarantine for 14 days.
School Scenario 3: A student in a class tests positive. All classmates and teachers or staff of the positive case should be placed on mandatory quarantine for 14 days.

School Scenario 4: An exposed individual has completed their quarantine period following an exposure to a positive case. The individual would like to return to school. All quarantined individuals should contact their primary care provider (PCP) to discuss their return to school. This will ensure that the individual adequately completed their quarantine without the development of symptoms based on their individual health circumstances.

Q20. If a person travels to a state with a mandatory quarantine upon return to NY, but their child, who lives with them, did not travel, does the child also have to quarantine, or can they attend school?

A. No. The child can attend school as long as the traveler in the household remains asymptomatic and does not test positive for COVID-19.

Q21. Does a student have to quarantine if a family member is quarantining, but does not have symptoms?

A. If a member of the household is quarantining because of either a known exposure to a COVID-19 positive individual or because of travelling, other members of the household can leave the home if that person can quarantine properly away from the household members, remain asymptomatic and does not test positive for COVID-19.

A quarantined person should:
- Separate themselves from other members of the household
- Use a separate bedroom and bathroom
- Do not share linens, towels, eating utensils, cups and plates
- Limit time in common household areas, such as kitchens.

Q22. What is the timeframe for contract tracing? Will you work with the school immediately?

A. OCHD will notify relevant school staff upon learning of a positive test for COVID-19 at the school. OCHD also verifies that individuals reporting a positive COVID test have a positive lab test result in order to proceed with further measures. Labs are required to report to New York State Department of Health any positive test results immediately, and local health departments aim to contact positive individuals within 24 hours of receiving that lab report. Schools should be conducting daily health screenings, including asking whether the child/staff has been in contact with a person who has tested positive.

SHARING OF MEDICAL INFORMATION/PARENTAL PERMISSION

Q23. Do schools need parental permission to send COVID-19 related medical information to the Orange Department of Health?

A. COVID-19 is a reportable communicable disease mandated under the New York State Sanitary Code (10NYCRR 2.10, 2.14), including reporting by schools nurses (10NYCRR 2.12). [Links to relevant regulations and instructions]

While the Family Educational Rights and Privacy Act (FERPA) generally requires parental permission for school personnel to disclose personally identifiable information from a student’s education record (including health information). But the law provides exceptions allowing disclosure without consent. Under the “health or safety emergency” exception, even though a student’s positive COVID-19 test would be
considered personal identifiable information, the school may report this information without parental consent to individuals whose knowledge of the information is necessary to protect the health or safety of students or other individuals. (See 20 U.S.C. § 1232g(b)(1); 34 C.F.R. §§ 99.31(a)(10) and 99.36.) These may include public health officials, school administration, trained medical personnel, school staff, and parents. The "health or safety emergency" exception is limited in time to the period of the emergency and generally does not allow for a blanket release of personal identifiable information from student education records.

Q24. Should masks be worn on the bus and in schools?
A. Yes. Proper use of masks (see attached CDC guidelines: https://www.cdc.gov/coronavirus/2019-ncov/prevent-getting-sick/diy-cloth-face-coverings.html ) is recommended for all individuals over the age of 2 while on the bus and in school. The gold standard of disease prevention includes social distancing, along with the use of masks and proper hand hygiene. The use of cloth face coverings at work and in other congregate settings, should be used in addition to other control measures, including engineering controls such as implementing social distance practices and physical partitions or barriers; and administrative controls such as frequent cleaning and disinfection protocols. Face coverings worn by students not only protect other students, but also protect teachers, aides, and others who move around the school.

IMPORTANT NOTES REGARDING MASK USAGE: It is important to properly store, clean, and don and doff masks. Individuals should not touch external, especially contaminated surfaces and then adjust the ties/loops of the mask. Hand hygiene is an important infection prevention and control measure. Wash your hands with soap and water for at least 20 seconds after putting on, touching, or removing respirators, masks, or cloth face coverings. Hand sanitizer, with a minimum of 60% alcohol may be used if soap and water are not available.

Each district/school plan should have written protocols regarding students taking mask breaks. When possible, mask breaks should occur outside or in other areas with good air flow, and where maximum social distancing can be accomplished.

Q25. What conditions would require special accommodation for students/staff?
A. Medically fragile individuals with special needs, and/or underlying medical conditions requiring special accommodations (ex. unable to wear mask, present to school in person, etc.) may be more vulnerable and susceptible to COVID-19 and complications. An outline of the special needs accommodations, as well the safety plan from the primary care provider (licensed medical professional), that include safety measures to protect the medically fragile individual from possibly contracting COVID-19, as well as potentially transmitting COVID-19 to others in a congregate setting, will be instrumental in assisting with the local impact of this global pandemic.

THRESHOLD QUESTIONS

Q26. What parameters/conditions/metrics should we use as an early warning sign that positive cases or absenteeism are increasing beyond an acceptable rate?
A. Generally, schools in regions in Phase IV (which the Mid-Hudson entered on July 7th) can reopen if daily infection rate remains below 5% using a 14- Day Average. Schools will close if regional infection rate raises over 9% after August 1st. (To see the regional rate, go to https://forward.ny.gov/early-warning-monitoring-dashboard).
Q27. With regard to screening, should it be prior to entering the building or before they leave their house?
A. School districts are required to have a protocol in place to perform temperature and health screenings for COVID symptoms. Screenings by the parent/guardian prior to school are preferred to help prevent the spread of disease in the school. (See the NYSED Reopening Guidance). Symptomatic individuals should not leave their households. Parents/guardians/students should be provided with information explaining the importance of monitoring for symptoms and remaining at home whenever symptoms are recognized.

ENVIRONMENTAL

Q28. Previously, if there was a case, we had to close a building for 24 hours. Is that still the case?
A. Typically a 24-hour time period may be required for disinfection of an area or building. If disinfection can be conducted over night or during a weekend disruption of classes could be minimized. The CDC and NYSDOH recommend the following:
- Closing off areas used by a sick person and not using these areas until after cleaning and disinfection has occurred:
- Opening outside doors and windows to increase air circulation in the area.
- Waiting at least 24 hours before cleaning and disinfection. If waiting 24 hours is not feasible, wait as long as possible:
- Clean and disinfect all areas used by the person suspected or confirmed to have COVID-19, such as offices, classrooms, bathrooms, lockers, and common areas

Q29. Can assemblies, sports games, and other events take place?
A. No, assemblies, sports games, and other events that create crowded conditions (gathering of more than 50 individuals) are not recommended at this time due to the increased transmission potential.

Q30. Do you have any advice on use of cohorts?
A. Yes. Schools should recognize that as cohorts intermingle, there is inherently greater risk of transmission of COVID-19 to more people. Accordingly, schools are encouraged to use cohort models.

Q31. Can COVID-19 remain in the air?
A. There is growing evidence to suggest that the coronavirus may linger in the air, especially once aerosolized, including several documented cases that linked poor ventilation to spread of the virus. NYSDOH has noted that while masks are the best defense against that, better ventilation can help too, that means masks, and social distancing, and hand-washing — and safer air. Assessment of optimal filtration, air flow into classrooms, restrooms and congregate setting environments is prudent.

Paying particular attention to the possible aerosolization of particles, restrooms pose a concern due to the potential for congregating. Hence social distancing measures, masking requirements, adequate signage for proper hand hygiene, along with an evaluation of frequently touched surfaces and availability of touchless soap/hand sanitizer dispensers, as well as automatic towel dispensers instead of air hand dryers would be ideal.
Schools are required to adhere to the NYSDOH guidance (attached). NYSED also provides guidance which can be found here: http://www.nysed.gov/common/nysed/files/programs/reopening-schools/nys-p12-school-reopening-guidance.pdf
