

# COVID-19: Quarantine

## Who Should Quarantine:

- Someone who had close contact with someone who has COVID-19

- Travelers from non-exempt states or returning from international travel

- Someone who is awaiting test results

## What Does Quarantine Mean:

- **For someone who had close contact (not fully vaccinated):** Stay home for 10 days after your last contact with someone who has COVID-19, then monitor for symptoms for 4 more days. A negative test result does not get you out of quarantine.
- **For fully vaccinated close contacts:** Get a COVID-19 test 3-5 days after exposure and wear a face covering in indoor public spaces for 14 days (or until you receive negative test results). You do not need to quarantine.

- Check your temperature twice a day and monitor for symptoms.

- You cannot have visitors.

- You cannot go out in public (ex: work, grocery stores, banks, gas stations, beaches, or parks).
  - If you need supplies, someone can drop them at your door while you remain inside with the door closed.

- You can leave quarantine for necessary and emergency medical care. If you are symptomatic, please call ahead.
