October 2026 – Monthly Aquatics Management Summary

October 2026 – Monthly Aquatics Management Summary

October 2026 – Monthly Aquatics Management Summary

How Stormwater Ponds Have Been Affected

• Low input volumes / pond levels dropping: Because rainfall is well below average, stormwater ponds are receiving less runoff. This means water levels are lower than usual, which can reduce their capacity to buffer sudden rain events. Some ponds may be nearing a point where inflow cannot replenish what's lost to evaporation, seepage, or intentional discharge.
• Water quality changes: Lower volumes of water mean less dilution of pollutants. Runoff that does enter ponds (especially after light rains) can bring in nutrients, sediments, and debris that concentrate more in smaller volumes. Also, lower water depths can lead to higher water temperatures, which can exacerbate algal growth and reduce dissolved oxygen.
• Sedimentation and exposure: Some pond bottoms that might normally be submerged are now exposed or more shallow, which can lead to more sediment drying, compaction, or even cracking. Shoreline plants may also experience stress (or die back) during these lower water levels, reducing shoreline stabilization and increasing vulnerability to erosion when heavy rain returns.

Animal Activity & Ecological Impacts

• As ponds get shallower and warmer, you're likely to see more activity from amphibians and reptiles such as frogs, toads, turtles, and perhaps snakes, especially near pond edges and shallow zones. These animals often take advantage of warmer, shallow water to feed and breed (if water remains).
• Fish stress: Fish in smaller, warmer, lower-oxygen ponds may show signs of stress; some species that are less tolerant of low dissolved oxygen may decline, while more tolerant species (e.g. carp, certain catfish) may dominate.
• Birds and other wildlife that depend on ponds—waterfowl, wading birds, and even some mammals—may have less reliable water availability, less food (if aquatic invertebrate populations decline due to poor water quality), or may need to travel further.
• Insects: Mosquitoes often lay eggs in standing shallow water; with more shallow margins and less flow, some ponds may become better breeding grounds unless managed or disturbed.

What Fall Will Bring, and How It Will Affect Stormwater Ponds

As fall progresses, several shifts are likely:

• Rain patterns changing: Fall in Hillsborough typically brings a decrease in daily thunderstorms and summer convection, with fewer, but sometimes heavier, rain events. There may be occasional tropical systems or remnants that bring intense rainfall. Overall, average rainfall declines.

• Temperature drops: Nights will start to get cooler, daytime highs will moderate. Water temperatures in ponds will gradually decline, which can help with dissolved oxygen levels and reduce thermal stress on aquatic species.
• Lower evaporative loss: With less intense sun and lower temperatures, evaporation from pond surfaces will slow, helping to conserve water volumes in ponds.
• Vegetation changes: Aquatic and shoreline plants may slow growth; some species may die back. Leaves from surrounding trees will begin falling, which can introduce organic matter to ponds. This leaf litter can fuel microbial activity, possibly resulting in oxygen drawdown (as microbes decompose the organic matter), or contribute to nutrient loading if decomposition is rapid.
• Wildlife behavior shifts: Many species will begin preparing for winter (or the cooler season) – migration, hibernation, reduced activity. Some amphibians may lay final egg masses; others may seek wetter microhabitats. Birds may use ponds more for foraging as insects shift.
• Stormwater pond maintenance concerns: With lower flows, clogging of inlet/outlet structures from debris (fallen leaves, sediment) becomes more likely. Sediment that has built up during the wetter months could now be more exposed or compacted. If heavy rains come after dry spells, sudden runoff can produce flash events that erode pond banks or overtop structures if capacity hasn't been maintained.

Landscape Update

Account Manager: Casey Hallman

Report Date: 11/10/26

Dear Board Members and Residents, I hope this update finds you well. Floralawn would like to provide an overview of the recent landscape maintenance activities, property conditions, and upcoming work throughout Union Park East CDD.

Lawn Maintenance

Lawn maintenance is currently being performed on a bi-weekly service cycle for the winter schedule.

Detail & Shrub Maintenance

Shrub trimming, bed detailing, and weed control is being performed on a bi-weekly service cycle for the winter schedule.

Irrigation

The scheduled monthly irrigation inspection has been completed. Inspection indicated there was a clock that we just replaced. The module has burnt out the new module. It's been determined that the clock needs to be replaced now. The clock is malfunctioning and throwing codes. Minor issues attached to other clocks were fixed and repaired. The irrigation system will continue to be monitored in drier fall and winter months.

Overall Property Conditions

Overall, the property continues to present well, with the turf maintaining a healthy green appearance throughout much of the community. There is now more weed growth along the blvd given the recent weather conditions. However, the clubhouse area is currently showing little weed activity.

Additional Updates:

All recently installed plant material continues to look good and is establishing well.
The seasonal annual flower installation has been completed

.
The tree removal permit through Pasco County has taken longer than anticipated. All required paperwork has been submitted, and we are currently awaiting approval. Once the permit is issued, the approved tree removals can be scheduled and completed. Floralawn will continue monitoring property conditions and adjusting operations as necessary based on rainfall, turf conditions, seasonal growth, and overall site needs.

Thank you,Casey Hallman
