### **Heritage Harbour South CDD - Hole 16 Drainage Deficiencies**

Mark Bruce and I met on site last Friday to review the drainage deficiencies along Hole 16, both behind the condos and single-family homes.

The drainage deficiencies along this portion of the golf course have existed for as long as I have been the CDD engineer of record, since 2013. In reviewing the drainage plans for the golf course and Stoneybrook community, the drainage behind both the condos and single-family homes all connect to the golf course drainage system and probably should have had a drainage system that connects to the community drainage system. It is obvious that the drainage system of the golf course is not adequate to handle the flows from the golf course and water that flows from the condos, homes and lots that border the course.

An attempt was made by the condos to help alleviate their drainage issue by connecting their downspouts and extending a pipe to direct discharge into the golf course drainage inlets. While the intent had good intentions, the golf course drainage system continued to back up over the inlets and flood the areas behind the condos and on the golf course property. Since the drainage system appears that it was not designed to handle the added flows from the condos, my recommendation is to connect the downspouts from the condos and direct the flow away from the golf course inlets. For the northern building, it appears that a parallel drainage pipe can be installed directly behind the condos and connect all the downspouts and have the pipe sloped to the north and install a bubbler box at the north end of the condo and allow for the water to flow out of the bubbler box and down the slope to the north.

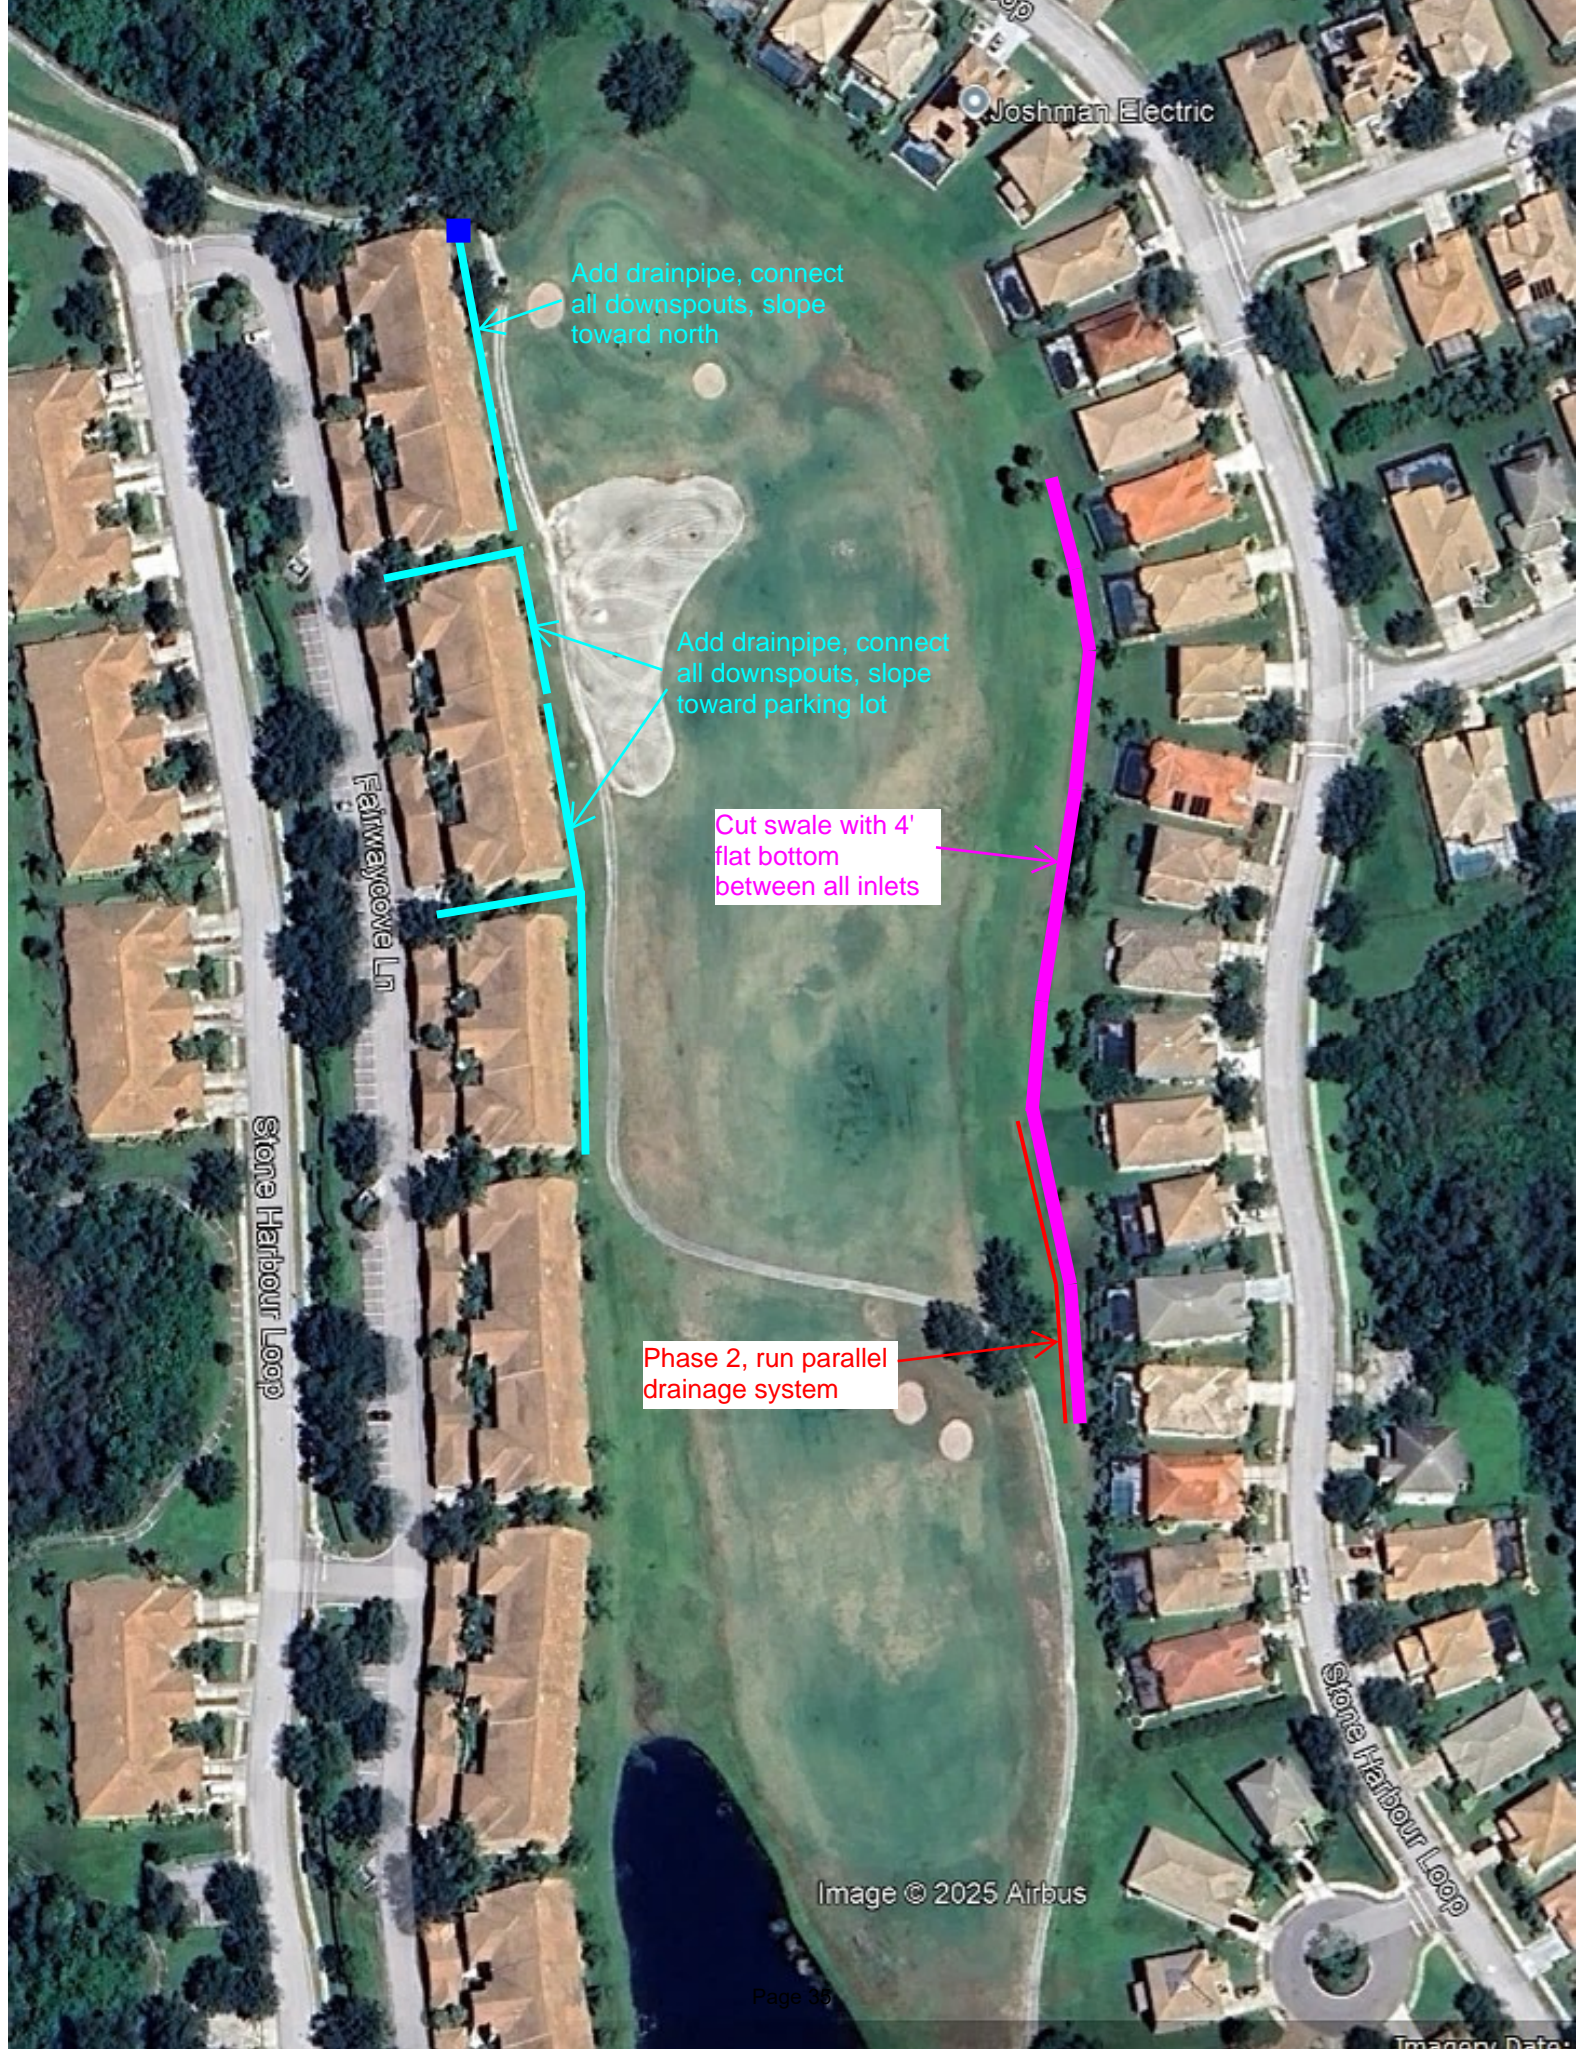

For the second and third condos, my recommendation is to install a drainage pipe that connects all the rear downspouts and then run the drainage pipe to the west and have the flow drain into the parking lot on the west side of the condos and into the drainage system designed for the condos. The fourth condo and all other condos to the south do not appear to have a drainage issue.

On the single-family side of the fairway, we have a similar drainage problem due to what appears to be an undersized drainage system at the rear of the residential lots along the entirety of the 16<sup>th</sup> hole. All the single-family homes appear to have a drainage pattern where the front half of the lot drains toward the road and back half of the lot drains toward the golf course and into their drainage system. The golf course drainage system does not connect to the drainage system along Stone Harbour Loop as there are no drainage easements or pipes between any of the homes. We discussed several options to help alleviate drainage issues and believe a phased system should be implemented to help resolve the drainage issue. In between most of the drainage inlets, the existing ground is humped up, creating individual drainage basins. The undersized pipes do not allow the water to flow quickly enough and causes each drainage basin to pool, which extends both onto the single-family lots as well as onto the golf course. Most of the drainage inlets have their grates close to the same elevation, so the recommended first phase of action would be to cut a swale with at least a 4' wide flat bottom between all the inlets. This would allow the water to flow overland when the pipe system is overwhelmed. Once the flow reaches the large drainage inlet, the pipe size increases and appears to adequately handle the flow. There is a weir on both the north and south side of the large concrete inlet and the swale would need to be cut to match this elevation. This first phase may be adequate to alleviate the drainage problem. If a drainage issue still exists, we would recommend a parallel drainage system beginning at the concrete inlet and continuing north as needed. There may only be a need for a few runs of parallel drainage pipes to handle the water. Phase three would possibly run pipes between homes to the east toward Stone Harbour Loop. This phase alters the existing drainage pattern as the water along Stone Harbour Loop drains into a different drainage basin and may require a SWFWMD permit modification.

Minutes Prepared by:

Rick Schappacher, P.E.

Heritage Harbour South CDD District Engineer

Add drainpipe, connect all downspouts, slope toward north

Add drainpipe, connect all downspouts, slope toward parking lot

Cut swale with 4' flat bottom between all inlets

Phase 2, run parallel drainage system
