Management Summary

Overall, the ponds are looking great from our previous applications. Ponds 16, 17, and 18 are starting to grow submersed algae again. These sites tend to have a high amount of algae growth. Staying on top of it with algaecide applications will help to prevent future algae blooms. Pond 20 doesn't have any algae at this time, but the submersed weeds will need follow-up application to stop the spread.

Our main focus for the upcoming visits are to control the growth of the submersed algae. Keeping this clear will be very beneficial in the warm summer months. We will have more success at getting rid of the algae during the fast growing season if it stays under control now in the winter.

Sites 29-32 are located near the construction and the mesh fence that was installed is making it very difficult to do proper applications to these sites.

Thank You For Choosing SOLitude Lake Management.
