

We need your input! How can we improve the Waverley Building?

WAVERLEY FEASIBILITY STUDY

FCPS will begin a 6-month study in Fall 2017 to determine the best way to modernize and expand Waverley Elementary School. The purpose of the study is to identify school renovation needs, additional space needs, options for meeting the needs, and estimated costs for each option.

During the study of the possibilities, staff will work with an architectural consultant to consider several options:

- Renovate and expand the current building
- Replace the current building with a larger new building
- Renovate the current building and the existing Rock Creek building for Waverley's use

The team will consider the school's new capacity. The Board of Education's approved size for an elementary school is 725 students. Because of the growth that is happening in the Waverley area and the lack of other school sites, the team will also consider a building that can seat approximately 1,020 students with a co-principal model for the administration.

This study is the first step in the process to modernize and expand Waverley Elementary School. The proposed timeline for the project is shown below, contingent on funding from the State and County. The timing of construction for Waverley ES depends on the timing of construction of the replacement of Rock Creek School on another site.

School Year	2017-18	2018-19	2019-20	2020-21	2021-22	2022-23
Rock Creek School Replacement Schedule	Design		New Rock Creek building under construction		New Rock Creek opens	
Waverley Elementary Modernization Schedule	Feasibility Study	Design		Redistricting Study		Modernized Waverley ES opens
				Construction		

MORE INFORMATION ABOUT THE PROJECT WILL BE POSTED ON THE FCPS WEBSITES:
