

## Organizing Your Apps

To create folders for your apps, follow these steps:

1.

Tap and hold one of the apps on your home screen. This will cause all of your apps to wiggle. DO NOT CLICK THE 'x' in the corner unless you want to delete the app.

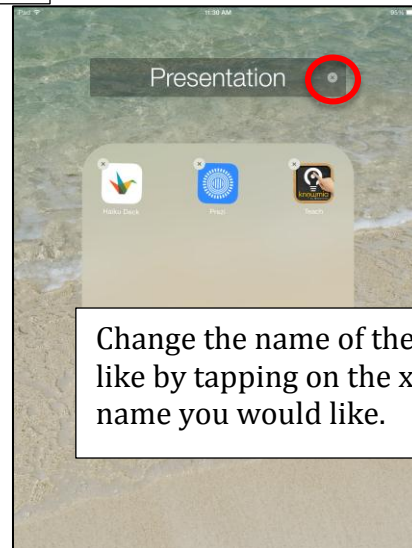

2.

Drag one app on top of another if you would like them in the same folder.

3.

Change the name of the folder if you would like by tapping on the x and typing in the name you would like.

4.

Press the home button to make your apps stop wiggling. Press again to return to your home screen. Once you have returned to your home screen, you will see your apps, AND the folder you have created.
