

ADVOCATE CHILDREN'S HOSPITAL CAR SEAT PROGRAM

Each year thousands of children are seriously injured and hundreds die as a result of not being properly restrained in a car seat.

Did you know...

- Using a car seat can reduce the risk of death in infants under 1 year by 71%, and toddlers aged 1 – 4 years by 54%.
- Booster seats can reduce the risk of serious injury in children aged 4 – 8 years by 45% compared to using a seat belt alone.
- The use of a seat belt in older children and adults can reduce the risk of death by almost half.

Advocate Children's Hospital is dedicated to the safety of all children entering and leaving our doors. For that reason we have certified car seat technicians that can evaluate and instruct on proper car seat installation.

If you are interested in making an appointment to have your car seat checked by a certified car seat technician or are looking for more information on the right type of seat for your child, please call our Injury Prevention Team at **708.684.7019**.
