

# How to Set up an iTunes Account

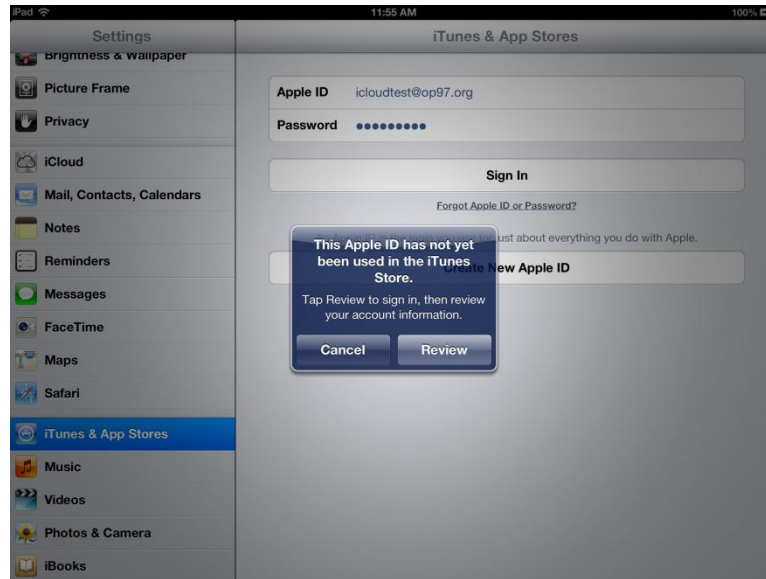

1. After setting up and iCloud account, go to Settings.

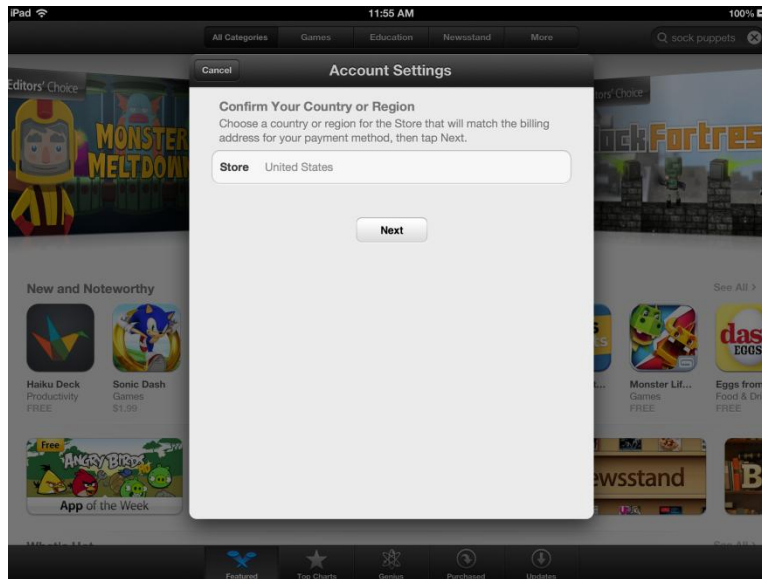

2. Click on iTunes & App Store on the left hand side. Then type in your Apple ID and password, then click sign in.

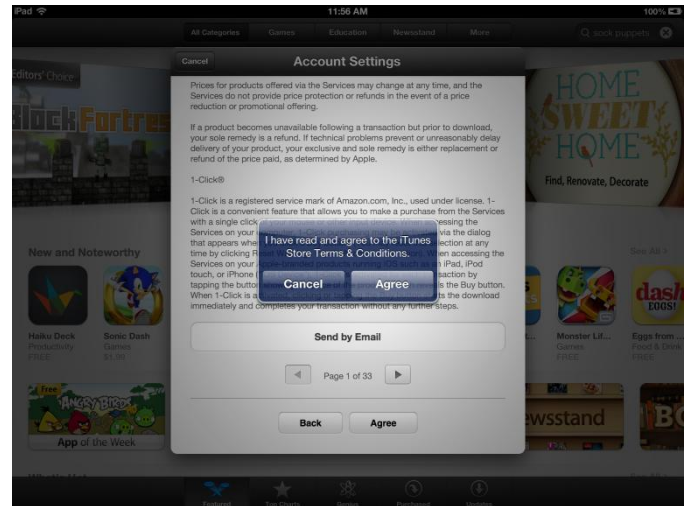

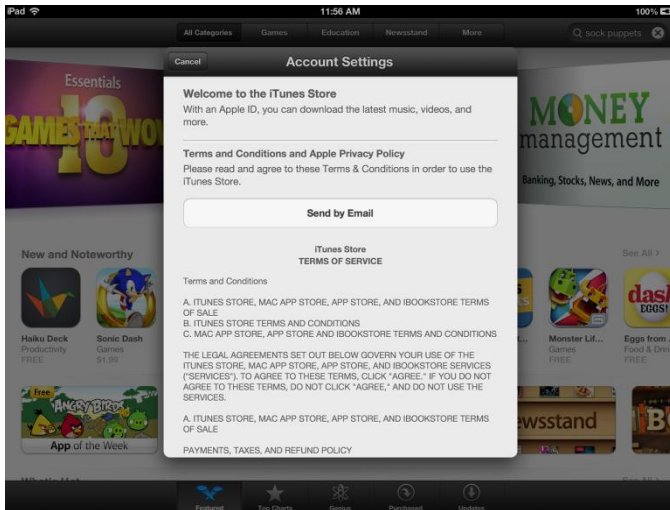

3. A pop up will come up (as long as you have already set up your iCloud account), and you will need to select “Review.”

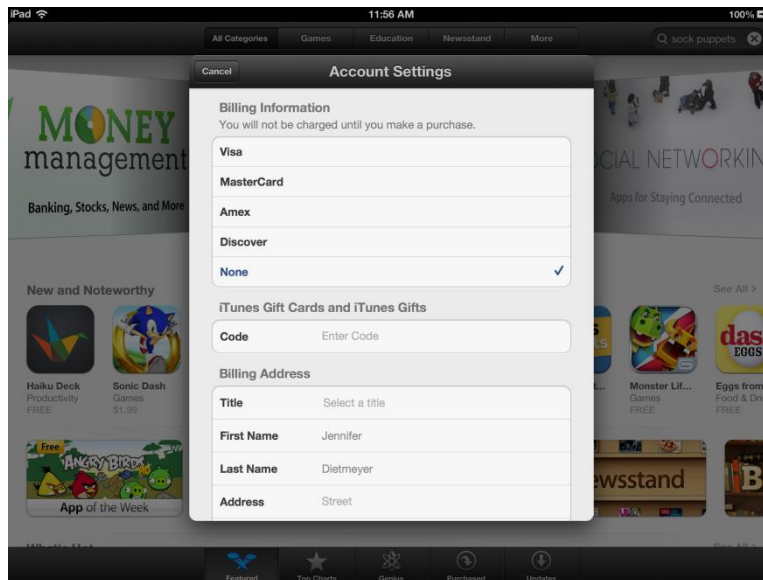

4. Select the United States store. Then hit next.

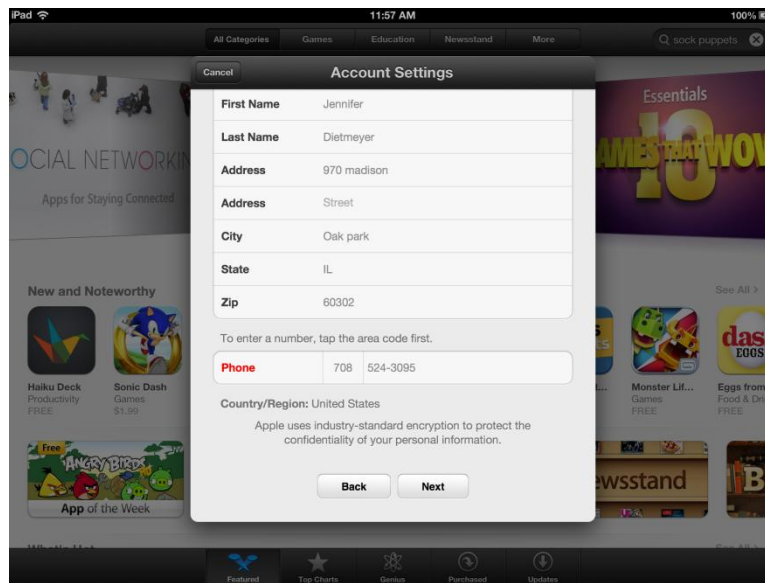

5. Read the terms and conditions, then if you'd like a copy, select "send by email." Then scroll down and agree or go back. If you do not agree the terms and conditions, you cannot continue on to the next step. Then a popup will occur, and you have to agree again.

6. This is where you can put in your credit card information. If you'd rather not have a credit card linked to this account, you can select none. If at a later date you'd like to add a credit card, you may do so.

7. Fill out the rest of the information that is requested. All areas have to be filled out. Then select the next button.

8. Once you have filled that out, you have successfully set up your iTunes account.
