How to set up your D97 Apple TV

Oak Park School District 97
Spring 2013
Before you start....

Make sure you have the following items:

1. Apple TV
2. Power Cord and remote control
3. Kanex ATV Pro
HDMI converter for use with older Mitsubishi or Epson projectors

OR

4. HDMI cable
For use with newer Epson projectors
What else will you need?
Putting it all together:
Here's how it's going to work:
Step 1:
Connect the ATV Pro converter to the Apple TV.
Step 2:

Use the VGA cable to connect the converter to the projector.
Note: if your projector has an HDMI port, you can use an HDMI cable without a converter:
Step 3:

Once everything is plugged in and turned on, you should see the Apple TV home screen displayed on the projector:

(If you don't see this screen, press the **Source** button on the LCD projector and select **HDMI**.)
To mirror your iPad to the Apple TV, press the **Home** button on the front of your iPad twice and swipe to the right.

Then tap the **Airplay** button at the bottom of the screen:
In the pop-up window that opens, select your Apple TV. (Apple TVs are named according to room number.)
**Note:** Your Apple TV has been configured to auto-generate a unique passcode whenever someone tries to connect to it. This will ensure your screen cannot be taken over by someone outside the room.

When you see the passcode on the projector screen, enter it on your iPad.
Turn mirroring **On**.
That's it! You should now see your iPad mirrored on the screen.
