

## Free Early Childhood (EC) Screening

**Early Detection is the key to future success!!!**

EC Screening takes a developmental snapshot of children between the ages of 3 and 5 in the areas of hearing, vision, coordination, speech, cognitive development, and social and emotional skills.

EC Screening provides a great opportunity for parents to ask questions of early childhood professionals about their child's development, even if parents have no specific concerns.

EC Screening gives parents valuable information about their child's growth, and helps identify any developmental factors that may interfere with a child's learning, growth and development.

EC Screening also helps to identify children who may need some extra support before they start school.
