

What's the size of the problem?

You were in a car accident and you're going to the hospital in an ambulance right now.

TINY

You fell off your bike and got a scraped knee.

SMALL

You got a paper cut

MEDIUM

You have a cough and a runny nose but don't have to stay home from school.

BIG

You have to go to the doctor tomorrow because you have a very bad fever and keep throwing up.

HUGE

What is the
problem?

What does
the student THINK the size of the
problem is?
(How do you know)

What do you
think is the ACTUAL
size of the problem?
Why?

What could they
do to calm down
and make
themselves feel better?

What can you
do as a friend
if you saw this happening?
