Tips for Charging your D90 Issue iPad

There are a few things you can do to reduce the battery drain on your iPad.

1. Make sure the battery is charged to 100% before using it (overnight is a good idea). You can check the last time an iPad was charged to 100% by going to Settings > Battery

2. Turn down the brightness on the iPad in Settings > Display & Brightness
3. Turn off Background App refresh for all apps in Settings > General > Background App Refresh

4. Make sure you are using the bigger Apple 12W charger and the school issued cord. Charging with a different wattage charger or off brand charger and cord will cause the iPad to not charge properly over time.

Zoom drains the battery exceptionally fast. We would recommend charging the battery fully overnight, and then again at lunch time.
